QUESTION 21 You have business services that run on an on-premises mainframe server. You must provide an intermediary configuration to support existing business services and Azure. The business services cannot be rewritten. The business services are not exposed externally. You need to recommend an approach for accessing the business services. What should you recommend? A. Connect to the on-premises server by using a custom service in Azure. B. Expose the business services to the Azure Service Bus by using a custom service that uses relay binding. C. Expose the business services externally. D. Move all business service functionality to Azure. Answer: B Explanation:

<http://azure.microsoft.com/en-gb/documentation/articles/service-bus-dotnet-how-to-use-relay/> QUESTION 22 You design an Azure web application. The web application is accessible by default as a standard cloudapp.net URL. You need to recommend a DNS resource record type that will allow you to configure access to the web application by using a custom domain name. Which DNS record type should you recommend? A. SRVB. MXC. CNAMED. A Answer: C Explanation:

<http://azure.microsoft.com/en-gb/documentation/articles/cloud-services-custom-domain-name/> QUESTION 23 A company hosts a website and exposes web services on the company intranet. The intranet is secured by using a firewall. Company policies prohibit changes to firewall rules. Devices outside the firewall must be able to access the web services. You need to recommend an approach to enable inbound communication. What should you recommend? A. The Azure Access Control Service B. Windows Azure Pack C. The Azure Service Bus D. A web service in an Azure role that relays data to the internal web services Answer: C Explanation:

<https://brosteins.com/2015/02/13/accessing-internal-data-from-mobile-apps/> QUESTION 24 You are designing an Azure application. The application includes services hosted in different geographic locations. The service locations may change. You must minimize the cost of communication between services. You need to recommend an approach for data transmission between your application and Azure services. The solution must minimize administrative effort. What should you recommend? A. Azure Table storage B. Service Bus C. Service Management APID. Azure Queue storage Answer: B Explanation:

<https://msdn.microsoft.com/library/azure/hh767287.aspx> QUESTION 25 You are designing a distributed application for Azure. The application must securely integrate with on-premises servers. You need to recommend a method of enabling Internet Protocol security (IPsec)-protected connections between on-premises servers and the distributed application. What should you recommend? A.

Azure Access Control B. Azure Content Delivery Network (CDN) C. Azure Service Bus D. Azure Site-to-Site VPN Answer: D Explanation:

<http://azure.microsoft.com/en-gb/documentation/articles/virtual-networks-create-site-to-site-cross-premises-connectivity/>

QUESTION 26 A company has 10 on-premises SQL databases. The company plans to move the databases to SQL Server 2012 that runs in Azure Infrastructure-as-a-Service (IaaS). After migration, the databases will support a limited number of Azure websites in the same Azure Virtual Network. You have the following requirements:- You must restore copies of existing on-premises SQL databases to the SQL servers that run in Azure IaaS.- You must be able to manage the SQL databases remotely.- You must not open a direct connection from all of the machines on the on-premises network to Azure.- Connections to the databases must originate from only five Windows computers.- You need to configure remote connectivity to the databases. Which technology solution should you implement? A. Azure Virtual Network site-to-site VPN B. Azure Virtual Network multi-point VPN C. Azure Virtual Network point-to-site VPN D. Azure ExpressRoute Answer: C Explanation:

<https://msdn.microsoft.com/library/azure/dn133792.aspx> QUESTION 27 You have several virtual machines (VMs) that run in Azure. You also have a single System Center 2012 R2 Configuration Manager (SCCM) primary site on-premises. You have the following requirements:- All VMs must run on the same virtual network.- Network traffic must be minimized between the on-premises datacenter and Azure.- The solution minimize complexity. You need to use SCCM to collect inventory and deploy software to Azure VMs. What should you do first? A. Configure client push for the Azure virtual network. B. Enable and configure Operations Insights in Azure. C. Install a cloud distribution point on an Azure VM. D. Install a secondary site underneath the primary site onto an Azure VM. Answer: C Explanation: <http://www.aidanfinn.com/?p=16047> QUESTION 28 You are running a Linux guest in Azure Infrastructure-as-a-Service (IaaS). You must run a daily maintenance task. The maintenance task requires native BASH commands. You need to configure Azure Automation to perform this task. Which three actions should you perform? Each correct answer presents part of the solution. A. Create an automation account. B. Create an Orchestrator runbook. C. Create an asset credential. D. Run the Invoke-Workflow Azure PowerShell cmdlet. E. Import the SSH PowerShell Module. Answer: ACE Explanation: <http://azure.microsoft.com/en-gb/documentation/articles/automation-create-runbook-from-samples/> <http://channel9.msdn.com/Shows/Azure-Friday/Azure-Automation-104-managing-Linux-and-creating-Modules-with-Joe-Levy> <http://azure.microsoft.com/blog/2014/07/29/getting-started-with-azure-automation-automation-assets-2/> QUESTION 29 A company has multiple Azure subscriptions. It plans to deploy a large number of virtual machines (VMs) into Azure. You install the Azure PowerShell module, but you are unable connect to all of the company's Azure subscriptions. You need to automate the management of the Azure subscriptions. Which two Azure PowerShell cmdlets should you run? A. Get-AzurePublishSettingsFile B. Import-AzurePublishSettingsFile C. Add-AzureSubscription D. Import-AzureCertificate E. Get-AzureCertificate Answer: AB Explanation: <https://msdn.microsoft.com/en-us/library/dn385850%28v=nav.70%29.aspx> QUESTION 30 Contoso, Ltd., uses Azure websites for public-facing customer websites. The company has a mobile app that requires customers sign in by using a Contoso customer account. Customers must be able to sign on to the websites and mobile app by using a Microsoft, Facebook, or Google account. All transactions must be secured in-transit regardless of device. You need to configure the websites and mobile app to work with external identity providers. Which three actions should you perform? Each correct answer presents part of the solution. A. Request a certificate from a domain registrar for the website URL, and enable TLS/SSL. B. Configure IPsec for the websites and the mobile app. C. Configure the KerberosTokenProfile 1.1 protocol. D. Configure OAuth2 to connect to an external authentication provider. E. Build an app by using MVC 5 that is hosted in Azure to provide a framework for the underlying authentication. Answer: ADE Explanation: <http://www.asp.net/mvc/overview/security/create-an-aspnet-mvc-5-app-with-facebook-and-google-oauth2-and-openid-sign-on> Braindump2go New Published Exam Dumps: Microsoft 70-534 Practice Tests Questions, 75 Latest Questions and Answers from Official Exam Centre Guarantee You a 100% Pass!
