2016/10 New Microsoft 70-470: Recertification for MCSE: Business Intelligence Exam Questions Updated Today!Free Instant Download 70-470 Exam Dumps (PDF & VCE) 283Q&As from Braindump2go.com Today! 100% Real Exam Questions! 100% Exam Pass Guaranteed! 1.|2016/10 70-470 Exam Dumps (PDF & VCE) 283Q&As Download: http://www.braindump2go.com/70-470.html2.|2016/10 70-470 Exam Questions & Answers: https://drive.google.com/folderview?id=0B9YP8B9sF_gNcERjZVFoYkdjTk0&usp=sharing QUESTION 29You are defining a named set by using Multidimensional Expressions (MDX) in a sales cube. The cube includes a Product dimension that contains a Category hierarchy and a Color attribute hierarchy. You need to return only the blue products in the Category hierarchy. Which set should you use? (More than one answer choice may achieve the goal. Select the BEST answer.)

A.   Option AB.   Option BC.   Option CD.   Option D Answer: C QUESTION 30An existing cube dimension that has 30 attribute hierarchies is performing very poorly. You have the following requirements:- Implement drill-down browsing.- Reduce the number of attribute hierarchies but ensure that the information contained within them is available to users on demand.- Optimize performance.You need to redesign the cube dimension to meet the requirements. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   set the AggregateFunction property to Sum on all measures. Use the SCOPE statement in a Multidimensional Expressions (MDX) calculation to tune the aggregation types.B.   Set the AttributeHierarchyOptimizedState property to FullyOptimized on the attribute hierarchies.C.   Create user-defined hierarchies. For the attributes sourced by the levels of the user-defined hierarchies, set the RelationshipType property to Rigid. Run incremental processing.D.   Remove as many attribute hierarchies as possible from the dimension. Reintroduce the information in the attribute hierarchies as properties. Implement natural hierarchies and set the AttributeHierarchyVisible property to False for attributes used as levels in the natural hierarchies. Answer: D QUESTION 31You are the administrator of a SQL Server Integration Services (SSIS) catalog. You have access to the original password that was used to create the SSIS catalog.A full database backup of the SSISDB database on the production server is made each day. The server used for disaster recovery has an operational SSIS catalog.The production server that hosts the SSISDB database fails.Sensitive data that is encrypted in the SSISDB database must not be lost.You need to restore the production SSIS catalog to the disaster recovery server.Which three steps should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

QUESTION 32Several reports are based on the same SQL Server Analysis Services (SSAS) cube. Each report has several datasets defined with complex Multidimensional Expressions (MDX) queries. The company maintains separate development, test and production environments.The reports are running slowly. You plan to analyze report performance. You have the following requirements:- Monitor query statistics on the production server with as little server overhead as possible.- Gather, replay, and analyze statistics on the test server with as little administrative effort as possible.- Identify the longest-running queries on both servers.- Document statistics on disk reads on both servers.You need to gather statistics and meet the requirements.Which features should you use? To answer, drag the appropriate feature or features to the correct location or locations in the answer area. (Use only features that apply.)

Answer:

QUESTION 33You are designing an extract, transform, load (ETL) process for loading data from a SQL Azure database into a large fact table in a data warehouse each day with the prior day's sales data. The ETL process for the fact table must meet the following requirements:- Load new data in the shortest possible time.- Remove data that is more than 36 months old.- Minimize record locking.- Minimize impact on the transaction log.You need to design an ETL process that meets the requirements. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.) A.    Partition the fact table by date. Insert new data directly into the fact table and delete old data directly from the fact table.B.    Partition the fact table by customer. Use partition switching both to remove old data and to load new data into each partition.C.    Partition the fact table by date. Use partition switching and staging tables both to remove old data and to load new data.D.    Partition the fact table by date. Use partition switching and a staging table to remove old data.Insert new data directly into the fact table. Answer: C QUESTION 34Drag and Drop QuestionsYou are validating whether a SQL Server Integration Services (SSIS) package named Master.dtsx in the SSIS catalog is executing correctly. You need to display the number of rows in each buffer passed between each data flow component of the package. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:
