QUESTION 321 You have an Exchange organization named contoso.com. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. The organization contains a mail-enabled Domain Local group named Group1. Users from outside the organization report that all e-mail messages sent to group1@contoso.com generate a non-delivery report (NDR). You need to ensure that users from outside the organization can successfully send e-mail to group1@contoso.com. What should you modify for Group1? A. the group type B. the mail flow settings C. the advanced settings D. the group scope Answer: B

Explanation:

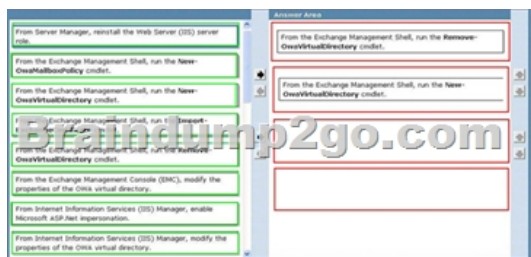

QUESTION 322 Drag and Drop Question You have an Exchange Server 2010 Service Pack 1 (SP1) organization named fabrikam.com. Users access Outlook Web App by using the mail.fabrikam.com host name. An administrator modifies the OWA

virtual directory. The users report that they can no longer connect to Outlook Web App. You need to recreate the OWA virtual directory. The solution must ensure that the users can connect to Outlook Web App by using mail.fabrikam.com. What should you do? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

QUESTION 323You have an Exchange Server 2010 Service Pack 1 (SP1) organization named fabrikam.com. A partner company has an Exchange Server 2010 SP1 organization named contoso.com. You plan to implement federated delegation between fabrikam.com and contoso.com. You need to identify which DNS records must be created to support federated delegation. Which DNS records should you identify? (Choose all that apply.) A. host information (HINFO)B. text (TXT)C. host (A)D. mail exchanger (MX)E. mail group (MG) Answer: BCEExplanation:Create a TXT record for federated delegation.Create an Autodiscover DNS record (CNAME).In this case I left the original A record answer in as that would already need to be created to resolve the IP, then a CNAME record would point to the A record (as CNAMEs can't point to IP addresses).Reference:

<http://technet.microsoft.com/en-us/library/ff601760.aspx>

<http://technet.microsoft.com/en-us/library/ff601760.aspx> QUESTION 324 You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The SMTP domain for the organization is contoso.com. You enable the Exchange anti-spam features. You need to specify a quarantine mailbox for the Exchange organization. What should you do? A. From the Exchange Management Console (EMC), modify the Content Filter agent. B. Run the Set-ContentFilterConfig from the Exchange Management Shell. C. Run the Set-TransportConfig cmdlet from the Exchange Management Shell. D. From the Exchange Management Console (EMC), modify the Recipient Filter agent. E. Run the New-TransportRule cmdlet from the Exchange Management Shell. F. Run the Set-OrganizationConfig cmdlet from the Exchange Management Shell. G. From the Exchange Management Console (EMC), modify the Sender Filter agent. H. Run the New-JournalRule cmdlet from the Exchange Management Shell. Answer: B Explanation: Set-ContentFilterConfig -QuarantineMailbox spamO@contoso.com

<http://technet.microsoft.com/en-us/library/bb123746.aspx>

<http://technet.microsoft.com/en-us/library/bb123746.aspx> QUESTION 325 You are a network administrator for a company named Contoso, Ltd. Contoso has an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. The organization contains the following Exchange servers: Two Hub Transport servers Two Edge Transport servers that have Edge Subscriptions Contoso merges with another company named Fabrikam, Inc. Fabrikam has an Exchange Server 2010 SP1 organization that uses the fabrikam.com SMTP domain. All mail exchange (MX) records for fabrikam.com point to the contoso.com Edge Transport servers. You deploy a solution for Contoso to journal all email messages by using Hub Transport rules. You need to ensure that all email messages received by fabrikam.com users from the Internet are journaled by the contoso.com Exchange organization. What should you do? A. From the Exchange Management Shell, run the new-accepteddomain-domain-type internalrelay command. B. From the Exchange Management Shell, run the new-sendconnector-addressspaces fabrikam.com command. C. From the Exchange Management Console (EMC), create an accepted domain that uses the authoritative domain type. D. From the Exchange Management Shell, run the new-receiveconnector -partner command. E. From the Exchange Management Shell, run the new-accepteddomain -domain-type externalrelay command. F. From the Exchange Management Console (EMC), create an accepted domain that uses the internal relay domain type. Answer: A Explanation: Accepted Domain = Any domain whose email will be routed by the Exchange organization transport servers Authoritative Domain = used to specify which SMTP domain is served by your Exchange organization; an exchange organization is authoritative when it handles mail delivery for recipients in the accepted

domain. Internal Relay = Hub to Hub between Exchange Organizations External Relay = Edge to Edge between Exchange Organizations Journaling can be done on a per user or per mailbox database basis. Journal rules can also be made Global, thereby journaling all messages that pass through the Hub Transport server. References:

QUESTION 326 Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2008 R2. You have a server named Server1 that runs Windows Server 2008 R2 Service Pack 1 (SP1). You plan to install the following Exchange Server 2010 SP1 server roles on Server1: Mailbox Client Access Hub Transport You need to prepare Server1 for the planned installation. You import the Server Manager module for Windows PowerShell. What should you do next? A. From Windows PowerShell, run `add-windowsfeature net-framework,rsat,adlds`. B. At the command prompt, run `servermanagercmd` and use the Exchange-Typical.xml template. C. From Windows PowerShell, run `add-windowsfeature net-framework`. From the Exchange Server 2010 installation program, select the Automatically install Windows Server roles and features required for Exchange Server check box. D. At the command prompt, run `servermanagercmd` and use the Exchange-Base.xml template. E. At the command prompt, run `setup /pl`. From the Exchange Server 2010 installation program, select the Automatically install Windows Server roles and features required for Exchange Server check box. F. From Windows PowerShell, run `add-windowsfeature net-framework,rsat-adds,web-server,webbasicauth`. Answer: C Explanation:

QUESTION 328 Your company has two offices. Each office is configured as an Active Directory site. The offices connect to each other by using a congested WAN link. Each office has a direct, high-speed connection to the Internet. Each site contains two Exchange Server 2010 Service Pack 1 (SP1) Hub Transport servers. You need to ensure that email messages sent to the Internet from the Exchange organization are never routed over the WAN link. What should you do from each site? A. From the Exchange Management Shell, run the `Set-TransportConfig cmdlet`. B. From the Exchange Management Console (EMC), modify the properties of the accepted domain. C. From the Exchange Management Shell, run the `Set-SendConnector cmdlet`. D. From the Exchange Management Console (EMC), modify the properties of the Receive connector. E. From the Exchange Management Console (EMC), modify the properties of the Send connector. F. From the Exchange Management Console (EMC), modify the properties of the remote domain. G. From the Exchange Management Shell, run the `Set-ForeignConnector cmdlet`. H. From the Exchange Management Shell, run the `Set-TransportAgent cmdlet`. Answer: C Explanation:

<http://technet.microsoft.com/en-us/library/aa998294.aspx>

QUESTION 329 You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains the servers configured as shown in the following table. The Mailbox servers are members of a database availability group (DAG) named DAG1. The organization also has a load balancing solution for Client Access. The load balancing solution has a virtual IP address that is available by using the mail.contoso.com host name. You create a new Client Access array that uses the outlook.contoso.com fully qualified name (FQDN). You need to ensure that all users connect to outlook.contoso.com from Microsoft Outlook 2010. Which Windows Powershell should you run?

Server name	Server role
Server 1	Client Access Hub Transport
Server 2	Client Access Hub Transport
Server 3	Mailbox
Server 4	Mailbox

A. Set-MailboxDatabaseCopyB. New-DatabaseAvailabilityGroupC. Set-MailboxServerD. Set-ClientAccessServerE. New-PublicMailboxDatabaseF. New-PublicFolderDatabaseG. Set-ClientAccessArrayH. Add-MailboxDatabaseCopyI. Set-DatabaseAvailabilityGroupJ. Set-PublicFolderDatabaseK. Add-RoleGroupMemberL. Add-DatabaseAvailabilityGroupServerM. Set-MailboxDatabase Answer: MExplanation: <http://technet.microsoft.com/en-us/library/bb123971.aspx><http://technet.microsoft.com/en-us/library/ee332317.aspx> <http://www.msexchange.org/articles-tutorials/exchange-server-2007/planningarchitecture/uncovering-new-rpcclient-access-service-exchange-2010-part1.html> QUESTION 330You have an Exchange Server 2010 Service Pack1 organization. The Organization contains a Hub Transport server named Server1 and an Edge Transport sever named server2. All servers are configured to use an internal DNS named DNS1 for host resolution. You configure an Edge Subscription from Server1 to Server2. You deploy a monitoring server named ServerApp1. ServerApp1 will send email notification to administrators. You need to ensure that ServerApp1 can relay email to the administrators through Server1. What should you do? A. From the Exchange Management Shell, run the Set-TransportServer cmdlet.B. From the Exchange Management Shell, run the Set-TransportConfig cmdlet.C. From the Exchange Management Console (EMC), create a transport rule.D. From the Exchange Management Console (EMC), modify the properties of the remote domain.E. From the Exchange Management Shell, run the Set-receiveConnector cmdlet.F. From the Exchange Management Console (EMC), disable the IP Block List feature.G. From the Exchange Management Console (EMC), modify the properties of the accepted domain.H. From the Exchange Management Shell, run the Set-TransportAgent cmdlet. Answer: EExplanation: <http://technet.microsoft.com/en-us/library/hh529935.aspx> 70-662 Updated Questions are 2015 Latest Released Which 100% will Meet in Your 70-662 Test!
