Case Study - Scenario 1 (QUESTION 1 - QUESTION 16) Application Information You are developing two Windows Store apps by using JavaScript: a Personal Trainer app and a Client app. The apps will allow personal fitness trainers to interact with their remote clients. Business Requirements-Personal Trainer Application The Personal Trainer app must allow trainers to perform the following tasks:- Create and store video and audio recordings of workout routines. - View the profile and workout recordings for only one client at any time. Business Requirements-Client Application The Client app must allow clients to perform the following tasks:- Browse a list of the trainer's workout recordings.- Record workouts by using the built-in webcam.- Play, pause, restart, and stop workout recordings. - If the capability is supported, allow the client's webcam to pan as the client moves around the room.- Upload workout recordings for trainer review.- Update their individual profiles to indicate workouts completed, calories burned, and current weight. The Client app must validate that the client's subscription is valid. Technical Requirements-General The Personal Trainer and Client apps must meet the following technical requirements:- Connect to the Internet.- Store workout recordings in the cloud.- Enable retrieval of workout recordings by using a custom URL. - Encapsulate the video player in a custom control. Identify the maximum zoom of the user's webcam in millimeters. - Store client profiles in XML files in the trainers' Documents folders to allow for disconnected editing.- Synchronize the XML files with cloud storage by using a background task when the Internet is available.- Send trainer workout videos to cloud storage by using a background task when the trainer's device is idle. Indicate the status of the upload operation each time the trainer starts the app. Suspend the background task when the Internet is not available.- Separate business and complex logic into WinMD components. The solution debugging settings must include the WinMD components. Technical Requirements-Hardware Requirements The Personal Trainer and Client apps must support the following hardware requirements:- Windows 8- Webcam, microphone, and speakers- Internet connection While testing the apps, you identify the following issues:- When you start the app for the first time, the system displays this warning message: "This app needs permission to use your camera, which you can change in the app's settings."- When you run the `loadClientProfile()` method in the `clientData.js` file, you receive an "Access Denied" exception.- The `findCamera()` method in the `video.js` file throws an exception on some devices. - The `recordVideo()` method in the `video.js` file throws an exception when the device does not support tilting.
