QUESTION 581Your company has two Active Directory sites named New York and Los Angeles.When you disable IPv4 on a computer in the Los Angeles site, the computer authenticates by using a domain controller in the New York site.You need to ensure that IPv6-only computers in the Los Angeles site authenticate to domain controllers in the same site.What should you do? A. Install an Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) router in the Los Angeles site.B. Create Active Directory Domain Services connection objects between the two sites.C. Create Active Directory subnet objects for the Los Angeles site.D. Configure the NTDS Site Settings object for the Los Angeles site. Answer: C QUESTION 582A corporate network contains a Windows Server 2008 R2 Active Directory forest.You need to add a user principal name (UPN) suffix to the forest.Which tool should you use? A. Active Directory module for Windows PowerShellB. Active Directory Administrative Center consoleC. Active Directory Sites and Services consoleD. Active Directory Users and Computers console Answer: B QUESTION 583Hotspot QuestionYour network contains two DNS servers named Server1 and Server2.Server1 hosts a primary zone named contoso.com. Server2 hosts a secondary copy of the contoso.com zone.You need to configure how often Server2 will check for updates for the contoso.com zone.Which tab should you use? To answer, select the appropriate tab in the answer area.

Answer:

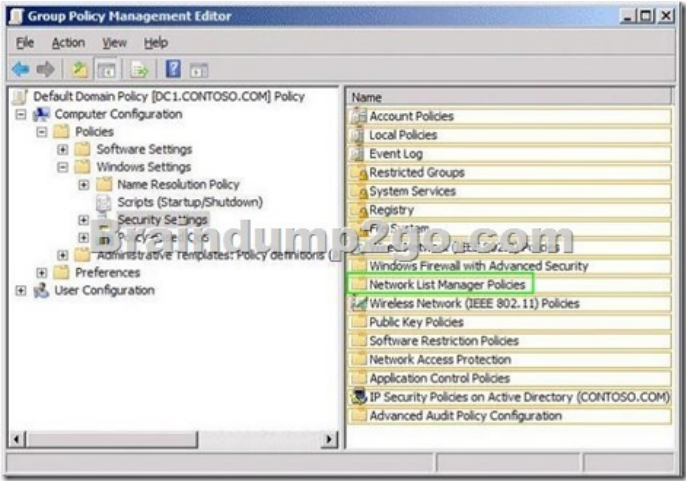

QUESTION 584 Your network contains an Active Directory domain named contoso.com. The domain has one Active Directory site. The domain contains an organizational unit (OU) named OU1. OU1 contains user accounts for 100 users and their managers. You apply a Group Policy object (GPO) named GPO1 to OU1. GPO1 restricts several desktop settings. The managers request that the desktop settings not be applied to them. You need to prevent the desktop settings in GPO1 from being applied to the managers. All other users in OU1 must have GPO1 applied to them. What should you do? A. Link GPO1 to the site and remove the link for GPO1 from OU1. B. Move the managers to a child OU of OU1 and block inheritance on the child OU. C. Configure the permissions on OU1. D. Disable the computer configurations of GPO1. Answer: B

QUESTION 585 Hotspot Question Your network contains an Active Directory domain named contoso.com. All users have laptops that run Windows 7. The laptops are joined to the domain. Windows Firewall is enabled on all the laptops. You need to ensure that when the users connect to unidentified networks, Windows Firewall uses the Public Profile. Which node in Group Policy Management Editor should you use? To answer, select the appropriate node in the answer area.

Answer:

QUESTION 586 Drag and Drop Question Your network contains an Active Directory forest named contoso.com. All client computers used by the sales department are in an organizational unit (OU) named Sales Computers. All user accounts for the sales department are in an OU named Sales Users. You purchase a new application. You need to ensure that every user in the domain who logs on to a sales department computer can use the application. The application must only be available from the sales department computers. What should you do? To answer, move the appropriate actions from the Possible Actions list to the Necessary Actions area and arrange them in the correct order.

Possible Actions	Necessary Actions
Assign the application by using a Group Policy object (GPO).	
Publish the application by using a Group Policy object (GPO).	
Copy the installation package to a shared folder on the network.	
Copy the installation package to a local drive on each sales computer.	
Create and link a Group Policy object (GPO) to the Sales Users OU.	
Create and link a Group Policy object (GPO) to the Sales Computers OU.	

Answer:

Possible Actions	Necessary Actions
Assign the application by using a Group Policy object (GPO).	
Publish the application by using a Group Policy object (GPO).	
Copy the installation package to a shared folder on the network.	Copy the installation package to a shared folder on the network.
Copy the installation package to a local drive on each sales computer.	
Create and link a Group Policy object (GPO) to the Sales Users OU.	Create and link a Group Policy object (GPO) to the Sales Computers OU.
Create and link a Group Policy object (GPO) to the Sales Computers OU.	Assign the application by using a Group Policy object (GPO).

QUESTION 587 Your network contains an Active Directory domain. You need to activate the Active Directory Recycle Bin in the domain. Which tool should you use? A. Dsmain B. Add-PSSnapin C. Enable-ADOptionalFeature D. Add-WindowsFeature

Answer: C Explanation: You can enable Active Directory Recycle Bin by using the following methods:- Enable-ADOptionalFeature Active Directory module cmdlet (This is the recommended method.)- Ldp.exe Note: Before you can make the recycle bin available, you must first update Active Directory schema with the required attributes. When you do this, the schema is updated, and then every object in the forest is updated with the recycle bin attributes as well. This process is irreversible once it is started. QUESTION 588 Your network contains an Active Directory forest named contoso.com. The domain contains two domain controllers named DC1 and DC2 that run Windows Server 2008 R2. DC2 holds the PDC emulator role. The power supply on DC2 fails. You seize the PDC emulator role to DC1. You replace the power supply on DC2. You need to bring DC2 back online as the PDC emulator as soon as

possible. The solution must minimize the disruption of services for users. What should you do? A. Connect DC2 to the network. Turn on DC2, and then transfer the PDC emulator role. B. Reinstall Windows Server 2008 on DC2 and promote DC2 to a domain controller. Transfer the PDC emulator role. C. Reinstall Windows Server 2008 on DC2 and promote DC2 to a domain controller. Seize the PDC emulator role. D. Disconnect DC2 from the network. Turn on DC2, and then seize the PDC emulator role. Connect DC2 to the network. Answer: A QUESTION 589 Drag and Drop Question Your network contains an Active Directory domain named contoso.com. You need to create a Group Policy object (GPO) that contains all of the settings included in the Windows Server 2008 R2 Security Baseline. The solution must minimize administrative effort. Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

- Export a baseline.
- Create a new GPO and import the settings.
- Create a new GPO by using a starter GPO.
- Restore a starter GPO from a backup.
- Create a new starter GPO.
- Install Microsoft Security Compliance Manager (SCM) 3.0.

Answer:

Export a baseline.

Create a new GPO and import the settings.

Create a new GPO by using a starter GPO.

Restore a starter GPO from a backup.

Create a new starter GPO.

Install Microsoft Security Compliance Manager (SCM) 3.0.

Install Microsoft Security Compliance Manager (SCM) 3.0.

Export a baseline.

Create a new GPO by using a starter GPO.

QUESTION 590 Your network contains an Active Directory forest named contoso.com. You need to identify the Password Setting object (PSO) applied to a user named User1. Which cmdlet should you run? A. Get-AdFineGrainedPasswordPolicy B. Get-AdFineGrainedPasswordPolicySubject C. Get-AdUserResultantPasswordPolicy D. Get-AdDefaultDomainPasswordPolicy Answer: C Braindump2go 70-640 Latest Updaed Braindumps Including All New Added 70-640 Exam Questions from Exam Center which Guarantees You Can 100% Success 70-640 Exam in Your First Try Exam!
