QuestionYou are a database administrator in a company that uses Microsoft SharePoint Server for all intranet sites. You are responsible for the installation of new database server instances.You must install Microsoft SQL Server Analysis Server (SSAS) to support deployment of the following projects. You develop both projects by using SQL Server Data Tools.You need to install the appropriate services to support both projects.What should you do? In the table below, select the appropriate services for each project.

NOTE: Make only one selection in each column. Each correct selection is worth one point. Answer: Explanation:Project1:Project2:

MultidimensionalNote: Analysis Services can be installed in one of three server modes: Multidimensional and Data Mining (default), Power Pivot for SharePoint, and Tabular.QUESTION 27You are a business analyst for a retail company that uses a Microsoft SQL Server Analysis Services (SSAS) multidimensional database for reporting. The database contains the following objects: You must create a report that shows, for each month, the Internet sales for that month and the total Internet sales for the calendar year up to and including the current month.You create the following MDX statement (Line numbers are included for reference only.): You need to complete the MDX statement to return data for the report.Which MDX segment should you use in line 01?

A. B. C. D. Answer: BExplanation:The following example returns the sum of the Measures. [Order Quantity] member, aggregated over the first eight months of calendar year 2003 that are contained in the Date dimension, from the Adventure Works cube.CopyWITH MEMBER [Date].[Calendar].[First8Months2003] AS Aggregate(PeriodsToDate([Date].[Calendar].[Calendar Year],[Date].[Calendar].[Month].[August 2003]))SELECT[Date].[Calendar].[First8Months2003] ON COLUMNS,[Product].[Category].Children ON ROWSFROM[Adventure Works]WHERE[Measures].[Order Quantity]

<https://docs.microsoft.com/en-us/sql/mdx/aggregate-mdx>QUESTION 28Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.You are developing Microsoft SQL Server Analysis Services (SSAS) tabular model.The model must meet the following requirements:You need to configure model.What should you do?A. Ensure that DirectQuery is enabled for the model.B. Ensure that DirectQuery is disabled for the model.C. Ensure that the Transactional Deployment property is set to True.D. Ensure that the Transactional Deployment property is set to False.E. Process the model in Process Full mode.F. Process the model in Process Data mode.G. Process the model in Process Defrag mode.Answer: AExplanation:DAX originally emerged from a Power Pivot add-in for Excel, as a formula language extension for creating calculated columns and measures for data analysis (which are also integral elements of one SSAS Tabular model database, too), but when Microsoft added support for DAX queries in SQL Server 2012, BI experts started "daxing" data from Tabular model databases.That trend continues, because of simplicity and fast query execution (related to DirectQuery mode in SSAS Tabular).<https://www.sqlshack.com/query-ssas-tabular-model-database-using-dax-functions/>

QUESTION 29Hotspot QuestionYou have a Microsoft SQL Server Analysis Services (SSAS) multidimensional project. You are developing a dimension that uses data from the following table: The ManagerKey column defines a foreign key constraint that references the EmployeeKey column. The table stores employee history information by using slowly changing dimensions (SCD). Changes to EmployeeName, Phone, or ManagerKey are managed as SCD Type 1 changes. Changes to SalesRegion are managed as SCD Type 2 changes. You create the following attributes, and set the KeyColumns and NameColumn properties to the columns listed in the table below: You need to add a parent-child hierarchy to the dimension to enable navigating the organization hierarchy. In the table below, identify the attribute that you must use for each attribute usage type.NOTE: Make only one selection in each column. Answer: Explanation:The ManagerKey column, the Manager attribute, defines a foreign key constraint that references the EmployeeKey column, the Employee attribute.QUESTION 30Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

A company has an e-commerce website. When a customer places an order, information about the transaction is inserted into tables in a Microsoft SQL Server relational database named OLTP1. The company has a SQL Server Analysis Services (SSAS) instance that is configured to use Tabular mode. SSAS uses data from OLTP1 to populate a data model.Sales analysts build reports based on the SSAS model. Reports must be able to access data as soon as it is available in the relational database.You need to configure and deploy an Analysis Services project to the Analysis Services instance that allows near real-time data source access.Solution: In the

Deployment Option property for the report, you set the Query Mode to DirectQuery with InMemory. Does the solution meet the goal? A. Yes B. No Answer: A Explanation: With DirectQuery with InMemory mode the queries use the relational data source by default, unless otherwise specified in the connection string from the client.
