QUESTION 20 What should you recommend for the updates to Sales.TransactionHistory? A. a REPEATABLE READ isolation level B. implicit transactions C. query hints D. a SNAPSHOT isolation level Answer: A QUESTION 32 You need to recommend a solution to back up DB1. What should you include in the recommendation? A. Azure Table Storage B. Azure Queue storage C. Azure Blob storage D. Azure Document DB Answer: C Explanation: Explanation: For SQL Server the Azure Blob Storage service offers a better alternative to the often used tape option to archive backups. Tape storage might require physical transportation to an off-site facility and measures to protect the media. Storing your backups in Azure Blob Storage provides an instant, highly available, and a durable archiving option.

<https://azure.microsoft.com/en-us/documentation/articles/storage-use-storage-sql-server-backup-restore/> QUESTION 154 You are using dynamic management views to monitor an SQL Server server named SQL1. A database administrator named Dbal1 must monitor the health of SQL1. You need to ensure that Dbal1 can access dynamic management views for SQL1. The solution must use the principle of least privilege. Which permissions should you assign to Dbal1? A. VIEW ANY DEFINITION B. VIEW SERVER STATE C. VIEW DEFINITION D. CONTROL SERVER Answer: B Explanation: To query a dynamic management view or function requires SELECT permission on object and VIEW SERVER STATE or VIEW DATABASE STATE permission.

<https://msdn.microsoft.com/en-us/library/ms188754.aspx> QUESTION 155 You have a customer who has several SQL Server 2012 database servers. You are designing a data warehouse for the customer. The data warehouse will use columnstore indexes. The customer identifies that the following must be supported for the column store indexes.- Data manipulation language (DML) statements- Nonclustered columnstore indexes- Clustered columnstore indexes- Partitioning You need to identify which technology requires the customer to implement an SQL Server 2014 database. What should you identify? A. clustered columnstore indexes B. nonclustered columnstore indexes C. data manipulation language (DML) statements D. partitioning Answer: A Explanation: SQL Server 2014 has the features of SQL Server 2012 plus updateable clustered columnstore indexes. This feature is required here as DML statements must be supported in the warehouse. [https://msdn.microsoft.com/en-us/library/gg492088\(v=sql.120\).aspx](https://msdn.microsoft.com/en-us/library/gg492088(v=sql.120).aspx)

QUESTION 157 Drag and Drop Question You have an SQL Server 2014 server. You plan to create four stored procedures that will use transactions. The stored procedures will be configured as shown in the following table.

Stored procedure name	Concurrency strategy
SP1	A transaction will only recognize data changes made before the start of the transaction. Other transactions are allowed to modify data.
SP2	A transaction can only read data made by another transaction that has been committed.
SP3	A transaction can only read data made by another transaction that has been committed.
SP4	During a transaction, no other transactions can modify data.

You need to recommend an isolation level for each stored procedure. The solution must support the concurrency strategy of each stored procedure and must minimize locks. What should you recommend? To answer, drag the appropriate isolation levels to the correct stored procedures. Each isolation level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Isolation Levels	Answer Area
READ COMMITTED	SP1: Isolation level
READ UNCOMMITTED	SP2: Isolation level
REPEATABLE READ	SP3: Isolation level
SERIALIZABLE	SP4: Isolation level
SNAPSHOT	

Answer:

Isolation Levels	Answer Area
READ COMMITTED	SP1: SNAPSHOT
READ UNCOMMITTED	SP2: REPEATABLE READ
REPEATABLE READ	SP3: READ COMMITTED
SERIALIZABLE	SP4: SERIALIZABLE
SNAPSHOT
