QUESTION 471 You have an Exchange Server 2010 organization. You need to identify the following information for a user's mailbox: The size of items in the Inbox folder The number of items in the Deleted Items folder You must achieve this goal using the minimum amount of administrative effort. Which cmdlet should you run? A. Get-MailboxFolder.B.

Get-MailboxFolderStatistics.C. Get-MailboxStatistics.D. Get-StoreUsageStatistics. Answer: B Explanation: By default, an HT

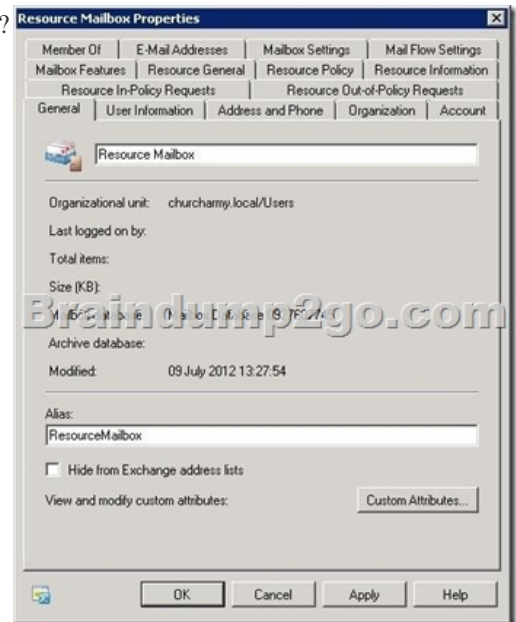

server already has a suitable connector set up and waiting for you to authenticate and submit mail; the "Client HTServerName" connector. When looking at its properties you will immediately notice the port which the connector listens on is port 587. Yes, this is an SMTP connector, but instead of using port 25, the standard for server to server SMTP, port 587 is used because this is the standard for SMTP mail received from client software.

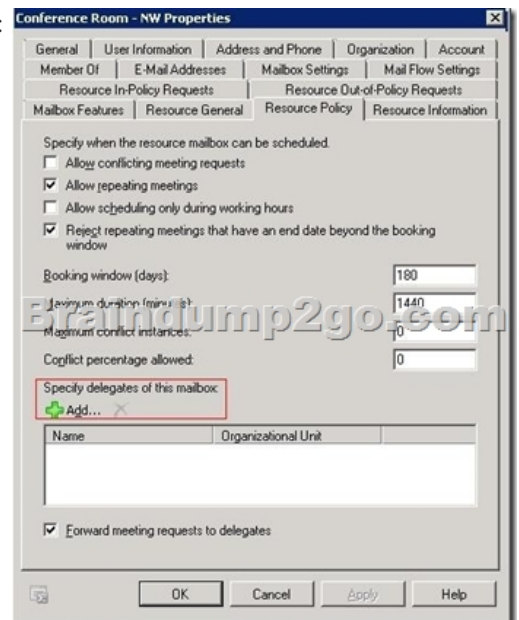

QUESTION 472 You are the Enterprise Administrator of an Exchange Server 2010 SP1 organization. Your server is responding to SMTP requests with the address cas1.contoso.com when it should be mail.contoso.com. What should you use to correct this? A. Set-TransportServer.B. EMC Hub Transport rule.C. EMC Hub Transport Properties.D. Set-TransportConfig.E. Set-TransportAgent.F. Set-ReceiveConnector. Answer: F Explanation: This should be: Set-ReceiveConnector -Identity -FQDN mail.fabrikam.com It's unlikely, but it could also be to do with the banner, so: Set-ReceiveConnector "From the Internet" -Banner "220 Contoso Corporation" Reference:

<http://social.technet.microsoft.com/Forums/en-US/exchange2010hosters/thread/86d80ab2-c45a-4d93-b641-d623cde53e81> Banner

Reference: <http://technet.microsoft.com/en-us/library/bb124740.aspx> QUESTION 473 You have an Exchange organization. All servers in the organization have Exchange Server 2010 Service Pack 1 (SP1) installed. You have a user named User1 that must be the only moderator of a room mailbox. Which tab should you click to complete this?

A. Resource Information.B. Resource Out-of-Policy Requests.C. Account.D. Mailbox Features.E. Resource General.F. Resource In-Policy.G. Resource Policy.H. Mail Flow. Answer: G Explanation:

QUESTION 474 You have an Exchange Server 2010 SP1 organization that contains a CAS array. There are two servers, named CAS-01 and CAS-02, in the CAS array. You have a machine on the internal network called Test1. When one Client Access server crashes Test1 cannot download the autodiscover details from the Client Access Server array. Which cmdlet should you use to rectify this? A. Set-ClientAccessArray.B. Set-ClientAccessServer.C. New-AutodiscoverVirtualDirectory.D.

Set-AutodiscoverVirtualDirectory. Answer: B Explanation: Make sure both CAS in the array have the correct autodiscover information: Set-ClientAccessServer-Identity "CAS-01" -AutoDiscoverServiceInternalUri "

<https://cas01.contoso.com/autodiscover/autodiscover.xml>" Reference: <http://technet.microsoft.com/en-us/library/bb125157>

QUESTION 475 You are the Enterprise Exchange Administrator of an Exchange Server 2010 SP1 organization. You need to give a user in the Sales department access to a mail enabled public folder on Server1. How would you achieve this? A. Use the Add-PublicFolderClientPermission cmdlet. B. Use the Set-MailPublicFolder cmdlet. C. Use the Enable-MailPublicFolder cmdlet. D. Use the Update-PublicFolder cmdlet. Answer: A Explanation: The full cmdlet string needed is:

Add-PublicFolderClientPermission -Identity "Sales Public Folder" -User SalesUser -AccessRights Reviewer -Server "Server1" If you need to give access to all folders beneath the top one, it can also be done with AddUsersToPFRecursive.ps1 -TopPublicFolder "Sales Public Folder" -User "Sales" -Permission Reviewer, however, this need is not implicitly specified in the question, as far as I recall. Reference: <http://technet.microsoft.com/en-us/library/bb124743>

QUESTION 476 Your network contains an Exchange Server 2010 Mailbox server. The server has one mailbox database. A user named User1 reports that several mails have been lost from his mailbox. You need to recover User1's email messages. The solution must not delete any other email messages in the mailbox database. What should you do? A. Create a database availability group (DAG), restore a backup of the mailbox database file, and then run the Restore-Mailbox cmdlet. B. Create a new Mailbox Recovery Database, restore a backup of the database file, and then run the Export-Mailbox cmdlet. C. Create a database availability group (DAG), restore a backup of the mailbox database file, and then run the New-MailboxExportRequest cmdlet. D. Create a new Mailbox Recovery Database, restore a backup of the database file, and then run the New-MailboxExportRequest cmdlet. Answer: D

QUESTION 477 You have an Exchange Server 2010 Service Pack 1 (SP1) organization. All users are configured to download offline address books (OABs) from public folders. Your company has a sales department that contains 35 users. You need to assign a custom OAB to all of the sales users only. You create the OAB. What should you do next? A. Run the Set-Mailbox cmdlet. B. Modify the properties of the Autodiscover virtual directory. C. Move the users to a new mailbox database. D. Run the Test-MapiConnectivity cmdlet. Answer: A

QUESTION 478 You have an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. You need to view a list of all the users assigned to the Records Management role group. What should you do? A. From the Exchange Management Shell, run the Get-RoleGroupMember cmdlet. B. From the Exchange Management Shell, run the Get-RoleAssignmentPolicy cmdlet. C. From the Exchange Control Panel (ECP), click the User Roles tab. D. From the Exchange Management Shell, run the Get-ManagementRoleAssignment cmdlet. Answer: B

QUESTION 479 You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains the servers configured as shown in the following table. The Mailbox servers are members of a database availability group (DAG) named DAG1. You need to enable Datacenter Activation Coordination (DAC) mode for DAG1. Which Windows PowerShell cmdlet should you run?

Server name	Server role
Server1	Client Access
Server2	Hub Transport
Server3	Mailbox
Server4	Mailbox

A. Add-DatabaseAvailabilityGroupServer B. New-DatabaseAvailabilityGroup C. Set-DatabaseAvailabilityGroup D. New-PublicFolderDatabase E. Set-ClientAccessArray F. Set-MailboxDatabase G. Add-MailboxDatabaseCopy H. Set-ClientAccessServer I. New-MailboxDatabase J. Set-MailboxServer K. Set-MailboxDatabaseCopy L.

Add-RoleGroupMember M. Set-PublicFolderDatabase Answer: C

QUESTION 480 Your network contains an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. The organization contains two Edge Transport servers, two Hub Transport servers, two Client Access servers, and three Mailbox servers. You need to prevent users from sending a single email message to more than 500 recipients. What should you do? A. From the Exchange Management Shell, run the Set-TransportConfig cmdlet. B. From the Exchange Management Console (EMC), create a Hub Transport rule. C. From the Exchange Management Console (EMC), create an Edge Transport rule. D. From the Exchange Management Shell, run the Set-TransportServer cmdlet. Answer: B
