Microsoft 70-488 Exam Dumps 142q Full Version Instant Download: <http://www.braindump2go.com/70-488.html> QUESTION 127 Drag and Drop Question You administer the SharePoint environment for a company. You create a SharePoint application to manage budgets and expenses. The application requires access to all site collections and resources. You need to package and publish the budget and expenses app. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Register the application with Azure Access Control Service.
- Publish the remote app component, and install the app component to SharePoint.
- Register the application with the SharePoint farm's App Management Service.
- Add the certificate serial number to the application's web.config and TokenHelper files.
- Configure the remote web server with a trusted certificate.

Answer Area

Answer:

Actions

- Register the application with the SharePoint farm's App Management Service.
- Publish the remote app component, and install the app component to SharePoint.
- Register the application with the SharePoint farm's App Management Service.
- Add the certificate serial number to the application's web.config and TokenHelper files.
- Configure the remote web server with a trusted certificate.

QUESTION 128 You are developing a site-provisioning engine for a company. You create a site request page that employees use to specify the site template, title, and URL for a site. The site request page stores site requests in a list named Site Requests that is at the root of the site collection. You configure an approval workflow for the list. Site creation must start at 3:00 AM each day. You must create sites in batches of no more than 10 sites. You must not create sites until they are approved. You need to create the site-provisioning engine. Which two actions would you perform? Each correct answer presents part of the solution. A. Create an ItemUpdated event receiver for the Site Requests list. Initiate site provisioning if the value of the ModerationInformation property is set to the value SPModerationStatusType.Approved. B. Create a new timer job that derives from SPWorkItemJobDefinition. Schedule the timer job to run at 3:00 AM. C. Create a new timer job that derives from SPJobDefinition. Schedule the timer job to run at 3:00 AM. D. Create an ItemAdded event receiver for the Site Requests list. Initiate site provisioning if the value of the ModerationInformation property is set to the value SPModerationStatusType.Approved. E. Create an ItemUpdated event receiver for the Site Requests list. Create a new work item if the value of the ModerationInformation property is set to the value SPModerationStatusType.Approved. Answer: AB Explanation: A: Site provisioning only initiated if it is approved. B: A Work Item Job can be scheduled to run operations in SharePoint. A Work Item Timer Job is essentially a queue where you add list items that need to be processed. When the Work Item Timer Job runs, it pulls items from the queue and process the item. Incorrect: Not C: An SP Job would not be able to process items from a queue.

<http://www.ericgregorich.com/blog/2014/1/25/using-work-item-timer-jobs-in-sharepoint> QUESTION 129Contoso, Ltd., uses SharePoint to manage projects and collaborate with a third-party contractor. The contractor stores employee account information in a MySQL database that the contractor manages. You must grant the contractor access to certain SharePoint sites. You must not add the contractor's employees to the Contoso Active Directory Domain Services domain. You need to implement a solution to authenticate the contractor's employees with SharePoint. What should you do? A. Create an empty project as a sandboxed solution. Implement a custom claims provider. B. Create an empty project as a farm solution. Implement a custom claims provider. C. Create an empty project as a farm solution. Implement a custom membership provider. D. Create an empty project as a deployment solution. Implement a custom membership provider. Answer: B Explanation: We need to setup the web application to use claims authentication and then implement a custom membership provider.

<http://stackoverflow.com/questions/19119776/is-it-possible-to-store-sharepoint-users-in-a-mysql-database> QUESTION 130A company uses SharePoint as its collaboration platform. The SharePoint site collection has many inactive sites. You need to identify the inactive sites in each web application of the farm by using Windows PowerShell scripts. Which property should you evaluate? A. \$site.DeadWebNotificationCount B. \$site.ExpirationDate C. \$site.CertificationDate D. \$site.LastContentModifiedDate E. \$site.CurrentResourceUsage Answer: D Explanation: How to find Most Active SharePoint Site Collections? Well, SPSite object has LastContentModifiedDate property, why don't we use it? Here is the nifty PowerShell script to find Most active Site collections based on content modified date. In a reverse, this can be used to find all In-active site collections also. Add-PSSnapin Microsoft.SharePoint.PowerShell -ErrorAction SilentlyContinue Get-SPWebApplication "<https://sharepoint.company.com>" | Get-SPSite -Limit All | foreach { Write-Host \$_.URL \$_.LastContentModifiedDate }

<http://www.sharepointdiary.com/2012/12/find-active-inactive-site-collections.html> QUESTION 131 Hotspot Question You develop a SharePoint app that companies use to track and submit employee expenses. You must create two versions of the app. Version A is highly customized for a specific client. Version B has reduced functionality and must be available to the general public. You need to publish the apps. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer:

Publishing requirement		Yes	No
You must publish Version A in the App catalog.		<input checked="" type="checkbox"/>	<input type="checkbox"/>
You add licensing requirements to Version B. You must publish Version B to the SharePoint store.		<input checked="" type="checkbox"/>	<input type="checkbox"/>

QUESTION 132 You prepare an on-premise farm to support the creation of SharePoint apps. You need to create an instance of a service application before building apps. Which service application should you create? A. On-premises service B. App Deployment service C. Site Subscriptions Settings service D. Secure Store service Answer: C Explanation: Apps rely on the App Management and Microsoft SharePoint Foundation Subscription Settings service applications. These service applications use the multi-tenancy features to provide app permissions and create the subdomains for apps. Note: Deployed services are named service applications. A service application provides a resource that you can share across sites in a farm or sometimes across multiple farms, and users can access them through a hosting web application. Service applications are associated to web applications by service application connections. <https://technet.microsoft.com/en-us/library/fp161236.aspx> All the 142 Questions and Answers in Braindump2go 70-488 Exam Dumps are the latest 70-488 Real Exam Questions not just 70-488 Practice Tests Questions!
