May-2016: Microsoft 70-243 New Exam Questions Released by Braindump2go.com Today for Free Download!NEW QUESTION

1 - NEW QUESTION 8 QUESTION 1 You create a new Active Directory user named User1. You create a new collection that contains the servers in PS1 and PS2. You need to ensure that User1 can perform the following tasks in SP1 and SP2:- Modify alerts- Set maintenance windows- Deploy application to servers The solution must minimize the number of permissions assigned to User1. What should you do? A. Add User1 as an administrative user. Assign the Full Administrator security role to User1. Remove the Default security scopes of the type Collection from User1. Add the new Collection to the scope of User1. B. Add User1 as an administrative user. Assign the Full Administrator security role to User1. Remove all of the Collection scopes from User1. Add the new Collection to the scope of User1. C. Add User1 as an administrative user. Assign the infrastructure security role to User1. Remove the Default security scopes of the type Collection from User1. Add the new Collection to the scope of User1. D. Add User1 as an administrative user. Assign Application Administrator security role to User1. Remove all of the Collection scopes from User1. Add the new Collection to the scope of User1. Answer: D QUESTION 2 You have a system Centre 2012 R2 Configuration Manager Service Pack 1 (SP1) stand-alone primary site that includes the servers configured as the following: Server name: ConfigurationServer1: Configuration Manager primary site server Server2: Microsoft SQL server 2012 SQL server reporting services (SSRS) reporting services point You have a custom report named Report1. Report1 has one parameter that has a default value. You need to ensure that users can run Report1. But they cannot modify the default value of the parameter. What should you do? A. Upload a report model file to the report by using SSRSB. Edit report by using the report BuilderC. Edit the report by using Business Intelligence Development StudioD. Edit security of the report by using SSRS Answer: D QUESTION 3 You have a system Centre 2012 R2 Configuration Manager Service Pack 1 (SP1) site. You use Configuration manager to manage client computers and servers. You need to ensure that client computer administrator can manage only client computers, and server administrators can manage only servers. The solution must ensure that objects created by the client computer administrator are not visible to the server administrators. Which three actions should you perform before you add the administrator as configuration manager administrators? A. Create a custom security role for the client computers and a custom security role for the serversB. Add client computer administrators and the server administrators to the Domain groupC. Create a unique security scope for the client computer objects and a unique security scope for the server objectsD. Set the security scopes for the client computer objects and the server objectsE. Create a collection for the client computers and a collection for the servers Answer: A QUESTION 4 You create a domain user named User1. The domain user is a member of the local groups on each client computer as described in the following: User: Local Group User1: Users User2: Administrators User3: Power Users User4: WinRM Remote WMI Users User5: Remote Management Users You plan to configure client Push installation. You need to configure the client push installation account. The solution must use the principle of least privilege. What should you do? A. Configure User3 as the client Push installation accountB. Specify User5 as the manager of the Clients OU, and then configure User5 as the client push installation accountC. Add User1 to the Client Admins group, and then configure User1 as the client push installation accountD. Configure User1 as the client push installation account Answer: C QUESTION 5 Drag and Drop Question Your network contains a system Centre 2012 R2 Configuration Manager Service Pack 1 (SP1) environment. Your company currently does not manage software updates. The company plans to use Configuration Manager to deploy updates to 600 client computers that run Windows 8.1 Pro and 3,000 client computers that run Windows 8.1 Enterprise. You need to deploy updates to the client computers by using Configuration Manager. Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer: Scan all of the client computers - 3 Configure a software update point - 4 Synchronize software updates - 2 Create a software updates deployment - 5 Run the setup for Windows server update services (WSUS) - 1 QUESTION 6 Your company has a main office and a remote office. The main office has 3,000 users. The remote office has 600 users. You deploy System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) at the main office. You need to ensure that users at the remote office can use

Configuration Manager to start bare metal installations of operating systems over the network. The solution must minimize the number of services deployed at the remote office. Which two features should you deploy at the remote office? Each correct answer presents part of the solution. A. a state migration point B. a server locator point C. a PXE-enabled distribution point D. a management point E. Windows Deployment Services (WDS) Answer: CD QUESTION 7 Hotspot Question You have a system Center 2012 R2 Configuration Manager Service Pack1 (SP1) deployment that contains the servers configured as shown in the following:

Server1	Primary site server
Server2	Management point
Server3	State migration point
Server4	Software update point
Server5	Software update point
Server6	Out of band service point

You plan to deploy client computers by using the operating system deployment feature. You need to configure the environment to ensure that operating system can be deployed by using operating system deployment. What should you do? Select the appropriate options.

Answer: Server 3 and open ports: 67, 68, 69 and 4011 QUESTION 8 You manage a system Centre 2012 R2 Configuration Manager Service Pack1 (SP1) stand-alone primary site that includes the servers configured as shown in the following table:

Server name	Role
Server1	Microsoft SQL Server
Server2	Microsoft SQL Server
Server3	Microsoft SQL Server

You need to provide a user named User1 with the ability to run reports. What should you do? A. On Server2, modify the permission of the reporting services folder by using Report Manager. B. On Server2, modify the Configuration Report Users security role by using Report Managers. C. On Server3, modify the database permission by using SQL server Management Studio. D. On Server1, assign user1 a security role by using the Configuration Manager Console.
