QUESTION 46  
You administer all the deployments of Microsoft SQL Server 2012 in your company. You have two servers in the same data center that hosts your production database. You need to ensure that the database remains available if a catastrophic server failure or a disk failure occurs. You also need to maintain transactional consistency of the data across both servers. You need to achieve these goals without manual intervention. Which configuration should you use? A. Two servers configured in a Windows Failover Cluster in the same data center SQL Server configured as a clustered instanceB. SQL Server that includes an application database configured to perform transactional ReplicationC. Two servers configured in the same data centerA primary server configured to perform log-shipping every 10 minutes A backup server configured as a warm standbyD. Two servers configured in different data centers SQL Server Availability Group configured in Synchronous-Commit Availability Mode One server configured as an Active SecondaryE. Two servers configured in the same data centerSQL Server Availability Group configured in Asynchronous-Commit Availability Mode One server configured as an Active SecondaryF. Two servers configured in different data centersSQL Server Availability Group configured in Asynchronous-Commit Availability ModeG. SQL Server that includes an application database configured to perform snapshot replicationH. Two servers configured on the same subnetSQL Server Availability Group configured in Synchronous-Commit Availability Mode Answer: HExplanation:

<http://msdn.microsoft.com/en-us/library/ff877931.aspx> QUESTION 47Drag and Drop QuestionYou are a database administrator of a Microsoft SQL Server 2012 environment. The environment contains two servers named SQLServer01 and SQLServer02. The database Contoso exists on SQLServer01. You plan to mirror the Contoso database between SQLServer01 and SQLServer02 by using database mirroring. You need to prepare the Contoso database for database mirroring. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

QUESTION 48You create an availability group that has replicas named HA/Server01 and HA/Server02. Currently, HA/Server01 is the primary replica. You have multiple queries that read data and produce reports from the database. You need to offload the reporting workload to the secondary replica when HA/Server01 is the primary replica. What should you do? A. Set the Availability Mode property of HA/Server02 to Asynchronous commit.B. Set the Readable Secondary property of HA/Server02 to Read-intent only.C. Set the Connections in Primary Role property of HA/Server01 to Allow read/write connections.D. Set the Availability Mode property of HA/Server01 to Asynchronous commit. Answer: BExplanation:
