Instant Download Free 300-080 PDF & 300-080 VCE from [Braindump2go.com](#). **100% Exam Pass Guaranteed!** NEW QUESTION 1 - NEW QUESTION 10: 1.|2016 Latest Cisco 300-080 CTCOLLAB PDF & 300-080 CTCOLLAB VCE 196Q&As Dumps Instant Download:<http://www.braindump2go.com/300-080.html> 2.|2016 New Cisco 300-080 CTCOLLAB Exam Questions

PDF:<https://drive.google.com/folderview?id=0B272WrTALRHcRVZjNGRLeDJsNk0&usp=sharing> QUESTION 1 When a database replication issue is suspected, which three tools can be used to check the database replication status? (Choose three.) A. Cisco Unified Communications Manager RTMT tool B. Cisco Unified Communications Manager Serviceability interface C. Cisco Unified Reporting D. Cisco Unified Communications Manager CLI interface E. Cisco IP Phone Device Stats from the Settings button F. Cisco Unified OS Administration interface Answer: ACD QUESTION 2 Which two troubleshooting tools would initially be the best to use when troubleshooting the PSTN gateway side of a call routing issue while using Cisco Unified Communications Manager? (Choose two.) A. RTMT trace output B. Cisco IOS debug commands C. Dialed Number Analyzer output D. Cisco Unified Communications Manager alerts E. Cisco IOS show commands Answer: BE QUESTION 3 Which command is used on an IOS Router that is acting as a SAF Forwarder to confirm its registration status with a SAF Client? A. show ip asf-forwarder status details B. show ospf neighbor details C. show ip interface details D. show cdp neighbor details E. show eigrp service-family ipv4 clients details F. show service-family asf-forwarder details Answer: E QUESTION 4 In a SAF deployment, the registration status looks correct and the learned patterns appear reachable, but calls are not routed. What is causing this issue? A. network connection failure between the SAF Forwarder and Cisco Unified Communications Manager B. network connection failure between the primary and backup SAF Forwarders C. TCP connection failure with the primary SAF Forwarder D. TCP connection failure with the backup SAF Forwarder Answer: A QUESTION 5 Refer to the exhibits. Assume that all learned SAF routes are placed in the SAF_Pt partition. An IP phone CSS contains the following partitions in this order: Internal_Pt, SAF_Pt. When the IP phone places a call to 3001, what will occur?

The screenshot displays two parts of the CUCM configuration interface. The top part, titled 'Learned Patterns', shows a table with two entries for the pattern '300X'. Both entries are in the 'Reachable' state. The bottom part, titled 'Pattern Definition', shows the configuration for the '300X' pattern. The 'Route Partition' is set to 'Internal_Pt'. The 'Route Class' is set to 'Default'. The 'Gateway/Route List' is set to 'SIP_Trunk'. The 'Route Option' is set to 'Route this pattern'. The 'Call Classification' is set to 'Offnet'. The 'Authorization Level' is set to '0'.

Pattern	Time/Range	Status	Protocol	AgentId	IP Address	TID
300X	20100403 13:55:55	Reachable	SIP	CD101511	10.15.11.5080	04423822
300X	20100403 13:55:55	Reachable	MGCP	CD101511	10.15.11.504502	04423822

Pattern Definition

Route Pattern*: 300X

Route Partition: Internal_Pt

Description:

HLPP Precedence*: Default

Resource Priority Namespace Network Domain: < None >

Route Class*: Default

Gateway/Route List*: SIP_Trunk (Edit)

Route Option:
☒ Route this pattern
☐ Block this pattern (No Error)

Call Classification*: Offnet

☐ Allow Device Override ☒ Provide Outside Dial Tone ☐ Allow Overlap Sending ☐ Urgent Priority

☐ Require Forced Authorization Code

Authorization Level*: 0

A. The call will succeed and will be placed via the SAF network. SAF-learned routes always take precedence. B. The call will fail because it will be blocked by the route pattern. C. The call will be placed in a round-robin fashion between the SAF network and SIP_Trunk. D. The call will be placed in a round-robin fashion between the SAF network and SIP_Trunk. Every other call will fail. Answer: B QUESTION 6 Refer to the exhibits. Assume that all learned SAF routes are placed in the SAF_Pt partition. The 3XXX directory number pattern is being advertised by a remote cluster and is also being blocked by the local cluster that is shown in the exhibit. An IP phone is attached to the local cluster and is configured with a CSS that contains the following partitions: SAF_Pt and Internal_Pt in this order. When the IP phone places a call to 3001, what will occur?

Pattern Definition

Route Pattern* 3000

Route Partition Internal_PT

Description

Numbering Plan Not Selected

Route Filter None

PLMP Precedence* Default

Resource Priority Namespace Network Domain None

Route Class* Default

Gateway/Route List* SIP_Trunk

Study Option

☐ Allow Device Override ☒ Provide Outside Dial Tone ☐ Allow Overlap Sending ☐ Urgent Priority

Purge and Block SAF CCD Learned Routes Information

Learned Pattern 3000

Learned Pattern Prefix

Remote Call Control Identity

Remote IP

A. The call will succeed and will be placed via the SIP_Trunk.B. The call will fail because it will be blocked by the CCD Blocked Learned Route configuration.C. The call will be placed in a round-robin fashion between the SAF network and SIP_Trunk.D. The call will placed in a round-robin fashion between the SAF network and SIP_Trunk. Every other call will fail.

Answer: A QUESTION 7When dialing any external SIP URI for a business-to-business call, an endpoint that is registered to the Cisco VCS Control fails to locate the remote endpoint. The same endpoint can successfully call another endpoint that is registered to the Cisco VCS Expressway. How do you resolve this issue? A. Add traversal call licensing on the Cisco VCS Expressway.B. Add traversal call licensing on the Cisco VCS Control.C. Add a multisite option to the endpoint.D. Configure a proper DNS zone on the Cisco VCS Expressway.E. Configure a traversal zone between the Cisco VCS Control and the Cisco VCS Expressway.F. Configure a SIP route pattern in Cisco Unified Communications Manager. Answer: D QUESTION 8Which CLI command monitors ILS replication progress? A. utils ils findxnodeB. utils ils show peer infoC. utils ils showpeerinfoD. utils ils lookup Answer: C QUESTION 9When parsing trace output after the call routing decision and path selection have been made, which two records can be found in the CCM|RouteList? (Choose two.) A. PretransformDigitStringB. CallingPartyNumberC. PretransformCallingPartyNumberD. RouteListNameE. findLocalDeviceF. RouteListCdr : Answer: DF QUESTION 10Refer to the exhibit. The exhibit shows the output of debug isdn q931. An inbound PSTN call was received by a SIP gateway that is reachable via a SIP trunk that is configured in Cisco Unified Communications Manager. The call failed to ring extension 3001. If the phone at extension 3001 is registered and reachable through the gateway inbound CSS, which three actions can resolve this issue? (Choose three.)

```
*Mar 24 16:17:54.190: ISDN Se0/0/0:15 Q931: RX -> SETUP pd = 8 callref = 0x00AA
Bearer Capability i = 0x8090A3
Standard = CCITT
Transfer Capability = Speech
Transfer Mode = Circuit
Transfer Rate = 64 kbit/s
Channel ID i = 0xA98381
Cause i = 0x8081 - Unallocated/unassigned number
*Mar 24 16:17:54.210: ISDN Se0/0/0:15 Q931: TX -> RELEASE_COMP pd = 8 callref = 0x80AA
Cause i = 0x8081 - Unallocated/unassigned number
```

A. Change the significant digits for inbound calls to 4 on the SIP trunk configuration in Cisco Unified Communications Manager.

B. Configure the digit strip 4 on the SIP trunk under Incoming Called Party Settings in Cisco Unified Communications Manager.

C. Configure a translation pattern in Cisco Unified Communications Manager that can be accessed by the trunk CSS to truncate the called number to four digits.D. Configure a called-party transformation CSS on the gateway in Cisco Unified Communications Manager that includes a pattern that transforms the number from ten digits to four digits.E. Configure a voice translation profile in the SIP Cisco IOS gateway with a voice translation rule that truncates the number from ten digits to four digits.F. Configure the Cisco IOS command num-exp 2288223001 3001 on the gateway ISDN interface.
