

## [2017-New-Version] 400-201 Exam VCE and PDF Dumps 627q Free Offered by Braindump2go [141-150]

2017 May New: Cisco 400-201 Exam Dumps with VCE and PDF Free Updated in [www.Braindump2go.com](http://www.Braindump2go.com) Today! 100% Real Exam Questions! 100% Exam Pass Guaranteed! 1. [2017 Version New 400-201 Exam Dumps (PDF & VCE) 627Q&As Download: <http://www.braindump2go.com/400-201.html> 2. [2017 Version New 400-201 Exam Questions & Answers Download: <https://drive.google.com/drive/folders/0B75b5xYLjSSNbGVFRUFuUW5TR2c?usp=sharing> QUESTION 141 What are three actions that the control word performs in MPLS AToM? (Choose three.) A. is used to identify the VC label B. is used for padding small packets C. preserves the sequence of the transported frames D. facilitates the load balancing of AToM packets in the MPLS backbone network E. carries control bits of the Layer 3 header of the transported protocol F. is used to identify the tunnel label Answer: BCDE Explanation: <https://ccedewiki.wordpress.com/2013/05/28/control-word-on-atom/> QUESTION 142 With EIGRP DUAL, a feasible successor is considered loop-free if which condition is true? A. Its AD is equal to the metric of the successor B. Its AD is less than the successor's FDC C. Its AD is equal to the successor's FDD D. Its AD is greater than the successor's FDE E. Its FD is equal to the metric of the successor Answer: B QUESTION 143 Customers connecting to a Service Provider for Internet access are intending to implement redundant peering. The design requirements call for preferring a primary link for both ingress and egress traffic. Secondary links should be used only during primary outages. What two BGP deployment options will accomplish this design goal? (Choose two.) A. On the router handling the secondary link, advertise routes with a MED value of 0. B. On the router handling the primary link, set the weight for all incoming routes to be a value of 0. C. On the router handling the secondary link, advertise all routes with a longer AS-PATH value. D. On the router handling the primary link, advertise all routes with a longer AS-PATH value. E. On the router handling the secondary link, set the local preference for all incoming routes to be a value of 0. Answer: CE QUESTION 144 Refer to the exhibit. R1 and R2 are multicast routers running PIM over Serial1/0. The PIM adjacency on R1 is not forming with the given configuration. What command can be entered on R1 to resolve the issue? A. no access-list 100 deny 103 any any B. no access-list 100 deny udp any any eq 103 C. no access-list 100 deny ip any host 224.0.0.1 D. no access-list 100 deny ip any host 224.0.0.2 Answer: A Explanation: All PIM protocols share a common control message format. PIM control messages are sent as raw IP datagrams (protocol number 103), either multicast to the link-local ALL PIM ROUTERS multicast group, or unicast to a specific destination. Reference: <http://www.metaswitch.com/resources/what-is-protocol-independent-multicast-pim> QUESTION 145 There are two cabling schemes to choose from when implementing a Cisco CRS-1 multi shelf system: single module cabling and multi module cabling. What is the maximum capacity of the LCCs that are supported in multi module cabling? A. 9 LCCs B. 7 LCCs C. 10 LCCs D. 6 LCCs E. 8 LCCs Answer: A QUESTION 146 Which statement about MPLS TE Fast Reroute (FRR) node protection operation is not correct? A. It requires a next-next hop backup tunnel. B. Point of local repair (PLR) swaps the next hop label and pushes the backup label. C. The backup tunnel terminates on the merge point (MP) where traffic rejoins the primary tunnel. D. The backup tunnel can have associated bandwidth capacity. E. Restoration time is expected under 50 ms. Answer: E QUESTION 147 Regarding to EIGRP protocol, a "successor" is: A. A neighbor that has met the feasibility condition B. A neighbor that has met the feasibility condition and has the lowest cost path towards the destination C. Any neighbor that is in the path towards the destination D. Any neighbor that is in the path towards the destination and whose reported distance equals the feasible distance. Answer: B QUESTION 148 Which three statements about MPLS Label Distribution Protocol (LDP) are valid? A. LDP hello packets are sent to UDP port 646 B. LDP hello packets are sent to TCP port 711 C. LDP sessions are TCP sessions to port 646 D. LDP sessions are TCP sessions to port 711 E. LDP establishes a peer relationship with another router that must be directly attached F. LDP can establish a peer relationship with another router that is not directly attached Answer: ACF QUESTION 149 Select two valid administratively scoped multicast addresses in networks running Interior Gateway protocols like EIGRP and OSPF (Choose two). A. 239.255.255.255 B. 224.0.0.10 C. 239.0.0.1 D. 224.0.0.5 Answer: AC QUESTION 150 A network engineer is designing the BGP architecture with a requirement of preventing the AS from becoming a Transit AS path, using the following configuration: router bgp 65000 neighbor 10.0.0.1 route-map BGP-ROUTE-POLICY in The goal is to prevent routes learned from 10.0.0.1 from being advertised to any other eBGP peering in the AS 65000. What command should be used within the route map to achieve this goal while keeping existing route policies in place? A. set community no-export additive B. set community no-advertise C. set community no-advertise additive D. set community no-export Answer: A Explanation: Setting no-advertise will block the route from being advertised to anywhere anywhere, question says it wants to prevent the AS from becoming transit, therefore no-export will stop any eBGP router advertising outbound and therefore stop transit. !!!RECOMMEND!!! 1.
