following characteristics describe the BPDU Guard feature? (Choose all that apply.)A. A BPDU Guard port should only be configured on ports with PortFast enabled.B. BPDU Guard and PortFast should not be enabled on the same port.C. BPDU Guard is used to ensure that superior BPDUs are not received on a switch port.D. A BPDU Guard port receiving a BPDU will go into err-disable state.E. A BPDU Guard port receiving a BPDU will be disabled.F. BPDU Guard can be enabled on any switch port.

**Answer: ADE**Real QuestionsWhich of the following pieces of information will the command show interface provide? (Choose all that apply.)A. Layer 1 statusB. Output queue dropsC. Interface CPU utilizationD. Cable type connected to interfaceE.

Layer 2 statusF. Input queue drops**Answer: ABEF**Real QuestionsWhich of the following are valid methods of providing a router with information concerning the location of the RP? (Choose all that apply.)A. Statically defined RPB. Bootstrap RouterC.

Auto-RPD. RP Discovery Protocol (RDP)E. RP HeliosF. RPARP(RARP)**Answer: ABC**Real QuestionsWhich of the following

statements regarding documentation would not be considered a helpful step in the troubleshooting process?A. Use the Cisco Auto Configuration tool.B. Use the Cisco Rollback feature.C. Automate documentation.D. Schedule documentation checks.E. Use the Cisco Configuration Archive tool.F. Require documentation prior to a ticket being closed out.**Answer: A**Real QuestionsA new

router is added to an existing HSRP standby group. One of the existing routers is in an active state, the other is in a standby state. Under what circumstance will the new router become the active router?A. The new router will become active immediately because it's the newest router introduced into the group.B. The new router can become active only when the existing active router and the

existing standby router become unavailable.C. The new router has a lower priority value.D. The new router will never become active unless the existing active router becomes unavailable.E. The new router has preempt configured and a higher priorityF.

The new router has a higher priority value.**Answer: E**Real QuestionsWhich of the following options represents the correct sequence of DHCP messages after a client initially boots?A. DHCPREQUEST, DHCPPOFFER, DHCPDISCOVER, DHCPACKB.

DHCPDISCOVER, DHCPPOFFER, DHCPREQUEST, DHCPACKC. DHCPPOFFER, DHCPACK, DHCPREQUEST, DHCPDISCOVERD.

DHCPDISCOVER, DHCPREQUEST, DHCPPOFFER, DHCPACKE. DHCPREQUEST, DHCPDISCOVER, DHCPPOFFER, DHCPACKF. DHCPDISCOVER, DHCPACK, DHCPREQUEST, DHCPPOFFER**Answer: B**

Real QuestionsWhich of the following topology situations would be a good candidate for configuring DMVPN?A. Extranet VPN B. Managed overlay VPN topologyC. Hub-and-spoke VPN topologyD. Central-site VPN topologyE. Full mesh VPN

topologyF. Remote-access VPN topology**Answer: E**Real QuestionsWhich of the following is not a valid reason for a packet to be punted?A. The TCAM has reached capacityB. An unknown destination MAC addressC. A packet being discarded due to a

security violationD. A Telnet packet from a session being initiated with the switchE. Routing protocols sending broadcast traffic F. A packet belonging to a GRE tunnel**Answer: C**Real QuestionsSeveral troubleshooters are about to work on the same problem.

Which of the following troubleshooting methods would be most appropriate to make the best use of the troubleshooters1 time?A. Bottom upB. Component swappingC. Top downD. Shoot from the hipE. Divide and conquerF. Follow the traffic path

**Answer: E**Real QuestionsYou examine the port statistics on a Cisco Catalyst switch and notice an excessive number of frames are

being dropped. Which of the following are possible reasons for the drops?A. Unknown destination MAC addressB. Bad cabling C. MAC forwarding table is fullD. Port configured for half duplexE. Port configured for full duplexF. Network congestion

**Answer: BF**Real QuestionsWhich of the following is a valid host IPv6 address? (Choose all that apply.)A. ff02:a:b:c::1/64B. 2001:aaaa:1234:456c::1/64C. 2001:000a:1b2c::/64D. 2fff:f:f:f::f/64E. ff02:33ab:l:32::2/128F.

2001:bad:2345:a:b::cef/128**Answer: BF**Explanation:Option B is valid, assuming theres a faulty colon : in the IPv6 Address, just

before the last 1, that is: 2001:aaaa:1234:456c::1/64Option F is valid, despite its odd network mask (128 bits), sometimes used in tunnel links.Incorrect answer:Option A is invalid, since it is a Multicast addressOption C seems to be invalid because the 3rd group

of characters includes an l (1b2c), but if it is a 1 instead of an l (faulty scan) and the required options are 3 instead of 2, then this address is still valid (2001:000a:1b2c::/64), because the 4th group of characters would be 0000 (remember that we can represent a

continuous sequence of zeros by ::).Option D is definitely invalid since it is a reserved address. As states the IANA online :document about the IPv6 Unicast Global Addresses, the range below is reserved, not allocated to any RIR (Regional Internet

Registry):2E00:0000::/7 IANA 1999-07-01 RESERVED!!!**RECOMMEND!!!**1.|2019 Latest Braindump2go 300-135 Exam Dumps
