QUESTION 292 You have 100 Windows 8.1 Pro client computers that run. Each computer has a single local hard disk drive, a DVD drive, and an external USB drive. Each computer has a different set of line-of-business (LOB) desktop applications that are installed locally. All of the applications store their configurations in the HKEY\_Local\_MachineSoftware registry hive. You need to design a recovery solution to ensure that you can restore the initial state of the locally installed LOB desktop applications if an application is misconfigured. The solution must preserve the existing locally stored user data. What should you do? A. Run redmg-exe. Perform a system reset. B. Create a restore point. Perform a system restore. C. Enable File History. Restore files by using File History. D. Create a recovery drive. Start the computer from the recovery drive and perform a refresh. Answer: C

QUESTION 293 You are a desktop support technician for your company. A user reports that her Windows 8.1 computer is missing .dll files. You need to restore the missing \*dll files without losing the user's data. What should you do? A. Use System Restore. B. Refresh the computer. C. Open PowerShell and run the wbadm cmdlet. D. Run the redmg command. Answer: A

QUESTION 295 You are the desktop administrator for a small company. You add a mirrored storage space as drive E to a marketing employee's Windows 8.1 computer for redundancy. You move the employee's .jpg and .bmp files to drive E. The employee can no longer search for the files. You need to ensure that the image files on drive E are indexed. What should you do? A. Right-click in an empty space under the Documents library. Select New Shortcut. Browse to drive E and select OK. Click Next and then click Finish. B. Open Libraries from Windows Search. Right-click and select New Name the library E. C. Right-click the properties of drive E. On the General tab, select the Allow files on this drive to have contents indexed in addition to file properties box. D. Right-click drive E. Select Include in Library. Create a new Library. Answer: C

QUESTION 297 You work for a software development company. Your supervisor wants Secure Boot enabled on all Windows 8.1 computers in the development department. You need to ensure that the computers boot only if they are using UEFI. What should you do on the Windows 8.1 computers? A. Make sure that all drivers are signed by a trusted certification authority (CA). B. Install Windows 8.1 Professional 64-bit. C. Install a Trusted Platform Module (TPM). D. In the BIOS, set the Compatibility Support Module (CSM) to Disabled. Answer: A

QUESTION 298 You are a desktop administrator at a college. The college uses three Windows 7 computers as registration kiosks with local user accounts. The college wants to upgrade the computers from Windows 7 to Windows 8.1. You need to automate migration of local user accounts by using User State Migration Tool (USMT). What should you do? A. Run ScanState with the /lac parameter on Windows 7, and then run LoadState with the /lac parameter on Windows 8.1. B. Run ScanState with the /mu parameter on Windows 7, and then run LoadState with the /mu parameter on Windows 8.1. C. Run ScanState on Windows 7, and then run LoadState with the /lac

parameter on Windows 8.1.D. Run ScanState with the /ccustom.xml parameter on Windows 7, and then run LoadState with the /custom.xml parameter on Windows 8.1. Answer: B Thanks For Trying Braindump2go Latest Microsoft 70-687 Dumps Questions! Braindump2go Exam Dumps ADVANTAGES: ? 100% Pass Guaranteed Or Full Money Back!?
