QUESTION 81You need to provide a developer the ability to create and modify database diagrams from an existing database by using SQL Server Management Studio. The solution must minimize the amount of permissions assigned to the developer. What should you do? A. Add the developer to the sysadmin role.B. Add the developer to the db_owner role.C. Grant the developer the CREATE TABLE permission only.D. Grant the developer the CREATE SCHEMA permission only. Answer: B QUESTION 82You are designing a database for a reporting solution that is based on data from an Online Transaction Processing (OLTP) database. The reports will contain aggregated data. You need to ensure that the reports will not affect query performance on the OLTP database. The solution must minimize the use of joins when performing the aggregate calculations. What should you do? A. Add a persisted computed column.B. Create indexed views in the OLTP database.C. Create partitioned tables in the OLTP database.D. Create a new denormalized database based on the OLTP database. Answer: D QUESTION 83You have a legacy application. You do not have access to the application source code. The application has a large denormalized table that contains 100 columns. The application uses stored procedures and views to perform all data manipulation language (DML) activities on the table. You need to optimize the performance of the application to meet the following requirement:- Reduce I/O- Minimize the storage requirements- Optimize insert, update, and delete operationsWhat should you do? A. Create nonclustered indexes on all columns in the table.B. Create new stored procedures that use the existing views.C. Create new views. Perform DML activities against the views.D. Create smaller tables. Update the views and stored procedures. Answer: D QUESTION 84You have an instance of SQL Server 2008 that has xp_cmdshell enabled. You need to design a stored procedure that meets the following requirements:- Allows authorized users to retrieve lists of files - Minimizes permissions assigned to objects- Minimizes security risksWhat should you include in the design? A. Grant users permission to execute xp_cmdshell.B. Grant users permission to execute sp_configure.C. Create a procedure that uses EXECUTE AS OWNER. Call xp_cmdshell in the procedure. Grant users permission to execute the procedure.D. Create a procedure that uses EXECUTE AS CALLER. Call xp_cmdshell in the procedure. Grant users permission to execute the procedure. Answer: C QUESTION 85You plan to create a database. The database will be used by a Microsoft .NET application for a special event that will last for two days. During the event, data must be highly available. After the event, the database will be deleted. You need to recommend a solution to implement the database while minimizing costs. The solution must not affect any existing applications. What should you recommend?More than one answer choice may achieve the goal. Select the BEST answer. A. Max Degree of ParallelismB. Resource GovernorC. Windows System Resource Manager (WSRM)D. Processor affinity Answer: D QUESTION 86You are creating a database that will store usernames and credit card numbers for an application. You need to recommend a solution to store and reuse the credit card numbers in the database. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer. A. Data encryptionB. Transparent Data Encryption (TDE)C. Encrypting File System (EFS)D. Data hashing Answer: A QUESTION 87You are a database developer. You plan to design a database solution by using SQL Server 2008. You have a database that contains a table and a table-valued function. The table-valued function accepts the primary key from the table as a parameter. You plan to write a query that joins the table to the results of the table-valued function.You need to ensure that only rows from the table that produce a result

set from the table-valued function are returned. Which join predicate should you use? A. CROSS APPLYB. OUTER APPLYC. INNER JOIND. LEFT OUTER JOIN Answer: A QUESTION 88You have a table that has 10 million rows. The table has a view that returns all of the rows. You discover performance degradation when you run an unfiltered view. You need to recommend a solution to replace the view. The solution must require that the returned data is filtered by a parameter. What should you use? A. an indexed viewB. a scalar functionC. a table-valued functionD. a table-valued type Answer: C QUESTION 89You are a database developer. You plan to design a database solution by using SQL Server 2008. The database will contain a common language runtime (CLR) user-defined scalar function. The function will return an integer value. You need to ensure that the computed columns that use the result from this function can be indexed. What should you do? A. 1. Ensure that the logic of the function returns the same value for the same input values and the same database state.2. Ensure that the IsDeterministic property is set to True.B. 1. Ensure that the logic of the function returns a different value for the same input values and the same database state.2. Ensure that the IsDeterministic property is set to True.C. 1. Ensure that the logic of the function returns the same value for the same input values and the same database state.2. Ensure that the IsDeterministic property is set to False.D. 1. Ensure that the logic of the function returns a different value for the same input values and the same database state.2. Ensure that the IsDeterministic property is set to False. Answer: A QUESTION 90You are a database developer. You plan to design a database solution by using SQL Server 2008. You configure a database on a server to use a common language runtime (CLR). You need to create a CLR assembly that enables the CLR stored procedure to access environment variables available on the server. You also need to ensure that the CLR assembly has the minimum permissions assigned. What should you do? A. Enable the TRUSTWORTHY database property.B. Create the assembly by using the SAFE permission set.C. Create the assembly by using the UNSAFE permission set.D. Create the assembly by using the EXTERNAL ACCESS permission set. Answer: D Thanks For Trying Braindump2go Latest Microsoft 70-451 Dumps Questions! Braindump2go Exam Dumps ADVANTAGES: ? 100% Pass Guaranteed Or Full Money Back! ? Instant Download Access After Payment!? One Year Free Updation!? Well Formated: PDF,VCE,Exam Software!? Multi-Platform capabilities ? Windows, Laptop, Mac, Android, iPhone, iPod, iPad.? Professional, Quick,Patient IT Expert Team 24/7/3147 Onlinen Help You!? We served more than 35,000 customers all around the world in last 5 years with 98.99% PASS RATE!? Guaranteed Secure Shopping! Your Transcations are protected by Braindump2go all the time!? Pass any exams at the FIRST try!
