QUESTION 111You need to recommend a solution to remediate the Exchange Server 2010 service failures. The solution must meet the technical requirements.What should you include in the recommendation? A.   Create an incident event workflow that triggers a runbook activity.B.   Create an incident event workflow that triggers a dependent activity.C.   Create a service request workflow that triggers a dependent activity.D.   Create a service request workflow that triggers a runbook activity. Answer: A QUESTION 112You need to recommend a solution to ensure that the sales department managers can create instances of App1 in Cloud1.What should you include in the recommendation? A.   A subscription in App Controller and a task in Service ManagerB.   A dashboard in Operations Manager and a distributed applicationC.   A task in Operations Manager and a distributed applicationD.   A service offering in Service Manager and a runbook in Orchestrator Answer: DExplanation:Not A, a task in SM won't do it.Not B = nonsense Not C OM is for monitoring not deployingD because you need Orch to deploy instances of App to a Cloud, either local or public cloud. CS is not talking about customers who need to manage the virtuals so no subscribtion needed. And CS is not talking about local and public integration. QUESTION 113Drag and Drop QuestionsYou create a virtual machine template for the BizTalk Server server.You need to recommend a method to update App1. The method must meet the technical requirements.Which four actions should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Case Study 4: Litware Inc (Question 114- Question 125)OverviewLitware, Inc. is a manufacturing company. Litware has a large data center and several offices.Existing EnvironmentNetwork InfrastructureThe network contains a third-party network management device that supports SNMPv3. The network contains network devices that support ICMP and SNMP and other devices that support SNMP only.A group named Network Technicians contains the user accounts for the support technicians who manage all of the network servers. The support technicians regularly install updates on the network servers.System Center 2012 InfrastructureLitware has all of the System Center 2012 components installed in the data centers. Service Manager is integrated with Configuration Manager and Operations Manager.The System Center 2012 Monitoring Pack for UNIX and Linux Operating Systems is installed on the Operations Manager servers.Software updates are deployed by using Windows Server Update Services (WSUS) and Configuration Manager.Virtualization InfrastructureLitware has 30 Hyper-V hosts that run Windows Server 2008 R2. The Hyper-V hosts are the members of failover clusters.Each office contains two virtual machines that run Microsoft SQL Server 2008 R2. The virtual machines are configured in a failover cluster.You have 100 virtual machines that run the following operating systems:- Windows Server 2012- Windows Server 2008 R2- Windows Server 2003 R2- Red Hat Enterprise Linux 6- SUSE Linux Enterprise Server 11Application InfrastructureLitware has a distributed application named App1 that is installed on several virtual machines. The failover clusters host the databases used by Appl. The components of App1 are in a service template and a distributed application design.Several other applications are installed on dedicated application servers. The application servers are deployed as virtual machines.Problem StatementsLitware identifies the following issues:- The primary service of App1, named App1Service, hangs frequently and logs events in the application log on the server where App1Service fails.- A recent security audit discovers that servers are vulnerable to attack due to misconfigurations of the operating system.RequirementsPlanned ChangesLitware plans to implement the following changes:- Replace the third-party network monitoring solution by using a System Center 2012 solution. The System Center 2012 solution must monitor all of the devices monitored by the third-party solution and must discover new devices.- On all of the virtual machines that have App1 installed, update App1 to a new version.Technical RequirementsLitware identifies the following technical requirements:- Application administrators must be able to back up and restore their respective application servers.- Each server must be backed up at a different time.- All virtual machines must be deployed by using virtual machine templates. The templates must be prepared by using Sysprep.- All resolved Service Manager incidents must close automatically after 72 hours.Availability RequirementsLitware identifies the following availability requirements:- Each request by a support technician to place a server in maintenance mode must be approved by a network administrator.- App1 must have 99.99 percent availability. QUESTION 114Hotspot QuestionYou are evaluating the implementation of an Operations Manager discovery rule to support the planned changes for the third-party monitoring solution.You need to recommend which configurations are required for the discovery rule.Which configurations should you recommend? (To answer, select the appropriate configurations in the answer area.)

Answer:

QUESTION 115You need to recommend a solution for the application server. The solution must meet the technical requirements.

What should you create? A.   A protection group that contains all of the Hyper-V hostsB.   A separate protection group for each application ownerC.   A protection group that contains all of the application serversD.   A separate protection group for each application server Answer: DExplanation:http://technet.microsoft.com/en-us/library/jj627971.aspx QUESTION 116You need to ensure that the owners of virtual machines are notified automatically if their virtual machine exceeds a specified resource utilization threshold.What should you create? (More than one answer choice may achieve the goal. Select the BESTanswer.) A.   A System Center 2012 Orchestrator runbook and System Center 2012 - Virtual Machine Manager (VMM) PRO tipsB.   A Service Manager incident workflow and an Operations Manager subscriptionC.   An Operations Manager alert and a System Center 2012 - Virtual Machine Manager (VMM) PRO tipD.   An Operations Manager alert and an Operations Manager subscription Answer: D Explanation:Not A or C because PRO tips are not notifications.http://technet.microsoft.com/en-us/library/cc917965.aspxNot B because Service Manager is not the recommended solution for a simple notification.Answer is D: An SCOM Alert and Subscription. Alert for the monitoring of the resource utilization.Subscription to the alert for an email notification. QUESTION 117You need to recommend a solution to meet the technical requirements for incident resolution.What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   From Operations Manager, auto resolve alerts.B.   From Service Manager, create an Incident Management workflow.C.   From Service Manager, create a custom management pack.D.   From Operations Manager, configure the Alert Sync connector. Answer: CExplanation: http://blogs.technet.com/b/thomase/archive/2011/11/25/autoclose-incidents-after-x-number-of-days.aspx QUESTION 118You need to recommend a solution to apply patches to the SQL Server servers. The solution must not affect user access to App1.What should you include in the recommendation? A.   From Configuration Manager, schedule a deployment package for software updates.B.   From Configuration Manager, schedule an application deployment.C.   From System Center 2012 - Virtual Machine Manager (VMM), schedule a compliance scan.D.   From System Center 2012 - Virtual Machine Manager (VMM), create a servicing window. Answer: AExplanation: http://windowsitpro.com/configuration-manager/using-microsoft-system-center-2012-configuration-manager-updatesDeployment package. A deployment package is like any other package in SCCM, except that it contains only the software update binary files. The client downloads only the required updates. As a result, deployment packages can contain a mix of updates from multiple OSs. In SCCM 2012 SP1, a client can fall back to Windows Update if the requested update isn't available in a deployment package. You should create a new deployment package twice a year.Sevice windows can be used if the VM was created from a Service Template.. It doesnt state this so I would say A is correct http://www.systemcentercentral.com/a-look-into-servicing-windows-in-virtual-machine-manager-2012-via-powershell/ QUESTION 119You need to recommend a solution to resolve the security issue for the servers.What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   A Microsoft Security Compliance Manager scan B.   A Configuration Manager Desired Configuration Management scanC.   A System Center 2012 - Virtual Machine Manager (VMM) compliance scanD.   A Microsoft Baseline Security Analyzer (MBSA) scan Answer: BExplanation:My reasoning is that they mention the security issue on the servers is an operating system misconfiguration and they already have ConfigMgr installed. This is required on several servers and with the use of ConfigMgr DCM we can also perform remidiation, not to mention alerting though SCSM. QUESTION 120You need to view the incidents and the related configuration items for the SQL Server clusters.What should you use? A.   The all incident queue viewB.   A service mapC.   The active problem viewD.   The service status list Answer: BExplanation:http://technet.microsoft.com/en-us/library/hh524252.aspxThis line stands out to me: Because a service map can show the relationship between incidents and configuration items, it is especially useful when you troubleshoot issues that might affect multiple incidents and configuration items. 70-246 Updated Questions are 2015 Latest Released Which 100% will Meet in Your 70-246 Test! Braindump2go New Released 70-246 Exam Dumps Contain All New Added Questions Which Will Help you Have A Totally Success in 2015 New Tear! Download our 100% Pass Guaranteed 70-246 Exam Dumps Full Version, special 10% Off Discount enjoyed!
