QUESTION 151 Which class is used to specify a set of features to support on the XmlReader object created by the Create method?

A. XmlReaderSettings B. XmlSecureResolver C. XmlValidatingReader D. XmlTextReaderSelectMany(c =>

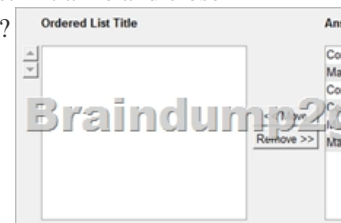

c.CustomerAddresses).Count() Answer: A QUESTION 152 You work as an ASP.NET Web Application Developer for SomeCompany. The company uses Visual Studio .NET 2010 as its application development platform. You create an ASP.NET Web application using .NET Framework 4.0. The application has an ASP.NET page. The page contains a method named GetCustomerOrderData that returns a DataSet. GetCustomerOrderData contains two DataTable objects named CustomerDetails and OrderDetails, respectively. You are required to display the data in OrderDetails in a DetailsView named ViewDetail. Choose the appropriate steps in the correct order to accomplish this.

Answer:

```
ViewDetail.DataSource =  
GetCustomerOrderData();  
ViewDetail.DataMember = "OrderDetails";  
ViewDetail.DataBind();
```

QUESTION 153 You have an ASP.NET web application that uses master pages and content pages. You must initialize and close multiple resources from different events. In what order do events in the master pages and content pages occur?

Answer: Master Page Init event
Content Page Init event
Content Page Load event
Master Page Load event
Content Page PreRender event
Master Page PreRender event

QUESTION 154 You work as an ASP.NET Web Application Developer for SomeCompany. The company uses Visual Studio .NET 2010 as its application development platform. You have recently finished the development of an ASP.NET Web application using .NET Framework 4.0. Now, you are deploying the ASP.NET Web application to a remote server. You are required to select a deployment method that will make sure that all Internet Information Services (IIS) settings, in addition to the Web content, are deployed to the remote server. Which of the following deployment methods will you select to accomplish this? A. Web Setup project B. Web-based deployment C. Deployment manifest D. Web Deployment Tool

Answer: D QUESTION 155 You are implementing an ASP.NET page. The page includes a method named GetCustomerOrderDataSet that returns a DataSet. The DataSet includes a DataTable named CustomerDetailsTable and a DataTable named OrderDetailsTable. You need to display the data in OrderDetailsTable in a DetailsView control named dtlView. Which code segment should you use? A. dtlView.DataSource = GetCustomerOrderDataSet(); dtlView.DataMember = "OrderDetailsTable"; dtlView.DataBind(); B. dtlView.DataSource = GetCustomerOrderDataSet(); dtlView.DataSourceID = "OrderDetailsTable"; dtlView.DataBind(); C. dtlView.DataSource = GetCustomerOrderDataSet(); dtlView.DataKeyNames = new string[] { "OrderDetailsTable" }; dtlView.DataBind(); D. DataSet dataSet = GetCustomerOrderDataSet(); dtlView.DataSource = new DataTable("dataSet", "OrderDetailsTable"); dtlView.DataBind();

Answer: A QUESTION 156 You are implementing an ASP.NET page. You add and configure the following ObjectDataSource. <asp:ObjectDataSource SelectMethod="GetProductByProductId" ID="odc" runat="server" TypeName="ProductDAL"><SelectParameters> <asp:Parameter Name="productId" Type="Int32" /> </SelectParameters></asp:ObjectDataSource> The page will be called with a query string field named pid. You need to configure the ObjectDataSource control to pass the value of the pid field to GetProductsByProductId method. What should you do? A. Replace the asp.QueryStringParameter with the following declaration. <asp:QueryStringParameter DefaultValue="pid" Name="productId" Type="Int32" /> B. Replace the asp.QueryStringParameter with the following declaration. <asp:QueryStringParameter QueryStringField="pid" Name="productId" Type="Int32" /> C. Add the following event handler to the Selecting event of the ObjectDataSource control. protected void odc_Selecting(object sender, ObjectDataSourceSelectingEventArgs e) { InputParameters["pid"] = Request.QueryString["productId"]; } D. Add the following code segment to the page's code-behind. protected void Page_Load(object sender, EventArgs e) { odc.SelectParameters.Add("productId", Request.QueryString["pid"]); }

Answer: B QUESTION 157 You are implementing an ASP.NET Web application that retrieves data from a Microsoft SQL Server database. You add a page that includes the following data source control. <asp:SqlDataSource id="sqlds" runat="server" ConnectionString="<%= \$ConnectionStrings:MyDB %>" SelectCommand="SELECT * FROM Companies" /> The page is accessed frequently, but the data in the database rarely changes. You need to cache the retrieved data so that the database is not queried each time the Web page is accessed. What should you do? A. Add the following attributes to the SqlDataSource control. DataSourceMode="DataSet" EnableCaching="True" CacheDuration="120" B. Add the following attributes to the SqlDataSource control. DataSourceMode="DataReader" EnableCaching="True" CacheDuration="120" C. Add the following configuration to the <system.web/> section of the web.config file. <caching><sqlCacheDependency enabled="true"><databases><add name="MyDBCach" connectionStringName="MyDB" pollTime="120" /></databases></sqlCacheDependency></caching> D. Add the following configuration to the <system.web/> section of the web.config file. <caching><sqlCacheDependency enabled="true" pollTime="120"><databases><add name="MyDBCach" connectionStringName="MyDB" /></databases></sqlCacheDependency></caching>

Answer: A QUESTION 158 You are implementing an ASP.NET page. Client-side script requires data. Your application includes a class named Person with a Name property of type string. The code-behind file of the page includes the following code segment. public string JsonValue; List<Person> people = GetPeopleList(); JavaScriptSerializer json = new JavaScriptSerializer(); You need to use the JavaScriptSerializer class to serialize only the Name property of each item in the people list. Which code segment should you use? A. JsonValue = json.Serialize(people.Select(p => p.Name)); B. var names = from person in people select person; JsonValue = "{" + json.Serialize(names) + "}"; C. JsonValue = json.Serialize(people.SelectMany(p => Name.AsEnumerable())); D. var names = from person in people select person; JsonValue = json.Serialize(names);

Answer: A QUESTION 159 You are implementing an ASP.NET application that uses LINQ to Entities to access and update the database. The application includes the following method to

update a detached entity of type Person.
private NorthwindContext _entities; public void UpdatePerson(Person personToEdit) { }
You need to implement the UpdatePerson method to update the database row that corresponds to the personToEdit object. Which code segment should you use?
A. _entities.People.Attach(personToEdit);

_entities.ObjectStateManager.ChangeObjectState(personToEdit, EntityState.Modified); _entities.SaveChanges();

B. _entities.ObjectStateManager.ChangeObjectState(personToEdit, EntityState.Added); _entities.SaveChanges();

C. _entities.People.ApplyCurrentValues(personToEdit); _entities.SaveChanges();
D. _entities.People.Attach(new Person() { Id = personToEdit.Id }); _entities.ObjectStateManager.ChangeObjectState(personToEdit, EntityState.Modified); _entities.SaveChanges();

Answer: A
QUESTION 160 You are implementing a Web page that allows users to upload files to a Web server. The page includes a

form that has a Submit button. You want to restrict uploads so that only files smaller than 1 MB can be uploaded. What should you

do?
A. Add an HTML input type="file" control. Add an onSubmit handler to the form to check the file size and cancel the form

submission if the file size is too large.
B. Add an HTML input type="file" control. Add an onChange handler to the input control to

check the file size and cancel the upload if the file size is too large.
C. Add an ASP.NET FileUpload control and configure it to run

on the server. Add a server-side OnClick handler to the form's Submit button to save the file only if the file size is allowed.

D. Add an ASP.NET FileUpload control and configure it to run on the server. Add a server-side OnDataBinding handler that saves the file

only if the file size is allowed.
Answer: C
