QUESTION 1 What action should the vSphere administrator take to allow for a new vApp to be created in the cluster?

A. Enable Distributed Resource Scheduling on the cluster.  
B. Create a Resource Pool in the cluster, and create the vApp in the Resource Pool.  
C. Enable High Availability on the cluster.  
D. Create a new Datacenter, and create the vApp in the new Datacenter.  
Answer: A  
QUESTION 2 A vSphere administrator receives a report of an issue with a vApp. After connecting to the environment with the vSphere Client, the administrator does not see the vApp, but instead sees the inventory shown in the exhibit.

What explains this behavior?  
A. The administrator is connected to the ESXi host running the vApp.  
B. The administrator is using the Web Client.  
C. The vApp is in a partially deleted state.  
D. The vApp has been converted to a resource pool.  
Answer: A  
QUESTION 3 A system administrator is unable to clone a windows 2008 server while connected directly to an ESXi host through vSphere Client. Which two methods can be used to complete the task? (Choose two.)  
A. Connect to vCenter Server and retry the operation.  
B. Use VMware Converter to perform the operation.  
C. Connect to the host using the Web Client and retry the operation.  
D. Use VMware Configuration Manager to perform the operation.  
Answer: AB  
QUESTION 4 An administrator needs to create and provision new virtual machines from a master image that can not be edited or powered on. Which type of resource is most appropriate for the administrator to perform the task?  
A. Full Clone  
B. Linked Clone  
C. Template  
D. Snapshot  
Answer: C  
QUESTION 5 A vSphere administrator is unable to vMotion a virtual machine between two hosts. An error message indicates that the USB device is not accessible on the target host. What is causing this issue?  
A. The USB device was not enabled for vMotion when it was added to the virtual machine.  
B. ESXi does not support vMotion with a USB device attached to the virtual machine.  
C. The VMkernel port for vMotion is not enabled for USB traffic.  
D. The virtual machine has the wrong USB controller installed.  
Answer: A  
QUESTION 6 A vSphere administrator needs to configure a virtual machine to meet a guaranteed CPU performance profile. Which configuration setting could the administrator choose?  
A. Set the CPU Limit to High  
B. Set the CPU Shares to 500MHz  
C. Set the CPU Guarantee to High  
D. Set the CPU Reservation to 500MHz  
Answer: D  
QUESTION 7 An organization's datastores are configured in a fully automated Storage Distributed Resource Scheduler (SDRS) cluster. The vSphere administrator determines that virtual machines are being migrated between datastores even though the datastores look evenly balanced. On further investigation, the administrator determines that the datastore's utilization percentages differ by 2%. Which Storage DRS setting should the administrator change to prevent the virtual machines from migrating prematurely?  
A. Edit the Storage DRS cluster settings to increase the percentage of the Space Utilization Difference threshold  
B. Edit the Storage DRS cluster settings to increase the percentage of the I/O imbalance threshold  
C. Edit the Storage DRS cluster settings to increase the size of the Space Utilization Difference threshold  
D. Edit the Storage DRS cluster settings to increase the size of the I/O imbalance threshold  
Answer: A

QUESTION 8A vSphere administrator enables Fault Tolerance on a powered off virtual machine that has the following configuration:- The virtual machine's single thin provisioned virtual disk is sized at 100GB.- The datastore that houses the virtual machine has 120GB of free space.After Fault Tolerance has been configured, another administrator attempts to use Enhanced vMotion to move a 30GB virtual machine file into the same datastore and receives an error.What condition could cause this behavior? A. Fault Tolerance inflated the virtual machine's virtual disk file.B. Fault Tolerance created a temporary logging file on the same datastore.C. Fault Tolerance created a secondary copy of the virtual machine's virtual disk file.D. The Fault Tolerance logging file ran out of disk space. Answer: A QUESTION 9While testing a Fault Tolerance setup on a virtual machine, a system administrator notices that the DRS automation level of the virtual machine has been automatically set to Disabled.The administrator needs to enable DRS to migrate the Fault Tolerance virtual machine to balance the cluster's CPU and memory loads. What should the administrator do? A. Enable Enhanced vMotion Compatibility (EVC) in the vSphere cluster.B. Move the virtual machine to a VMFS 5 datastore built on shared storage.C. Manually change the DRS automation level of the virtual machine to Enabled.D. Move the secondary virtual machine to a host with a Fault Tolerance VMkernel port. Answer: A QUESTION 10Which minor badge scores are used to calculate the Health score in vCenter Operations Manager? A. Time remaining, Capacity remaining, StressB. Workload, Anomalies, FaultsC. Stress, Faults, RiskD. Reclaimable Waste, Density Answer: B QUESTION 11A vSphere administrator has misconfigured vMotion in such a way that vMotion migrations are failing. Host 1:

Standard Switch: vSwitch1

VMkernel Port  
vMotion  
vmk3 : 192.168.1.2

Braindu

Host 2:

Standard Switch: vSwitch1

VMkernel Port  
vMotion  
vmk2 : 192.168.1.2

Based on the information shown, what is the cause of the problem? A. The vMotion VMkernel ports on the hosts are configured with the same IP address.B. The labels of the vMotion VMkernel ports are not identical.C. The vMotion VMkernel ports are not labeled identically.D. The vMotion VMkernel ports are using the same uplink. Answer: A QUESTION 12A small company wants to use VMware products for its production systems. The system administrator needs to recommend a solution that will deliver High Availability to the company's production applications.What is minimum vSphere offering that will support this requirement? A. vSphere EssentialsB. vSphere Essentials PlusC. vSphere HypervisorD. vSphere Standard Answer: B QUESTION 13A developer needs to create a multi-tier development stack for a home lab.Which vSphere product will support the architecture required for the least software cost? A. vSphere HypervisorB. vSphere EssentialsC. VMware PlayerD. VMware Workstation Answer: A QUESTION 14An administrator is unable to login to vCenter Server when using the vSphere web client. The administrator successfully accessed vCenter Server using the client earlier the same day.What is the most appropriate first step the administrator should take to resolve this issue? A. Verify the web browser being used has Adobe Flash plugin version 11.5 or later B. Verify the vCenter Single Sign-On service is running on the vCenter ServerC. Verify the vSphere Web Server service is running on the vCenter ServerD. Verify the administrator has permissions configured in vCenter Server Answer: B QUESTION 15What is a valid plug-in status for a plug-in that has been added to a vSphere client? A. DisabledB. UnknownC. StoppedD. Installed Answer: A QUESTION 16An administrator is evaluating whether to deploy vCenter Server on a Windows server or on a vCenter Server appliance. The administrator has the following requirements:- A web browser will be utilized to manage the vSphere environment.- 16 ESXi hosts will be deployed.- Licenses must be shared with a vCenter Server at another site.- An external Oracle 10g database server will be used to host the vCenter Server database.Why will the administrator need to deploy vCenter Server on a Windows server? A. Linked Mode is a requirement for the solution.B. Oracle 10g is a requirement for the solution.C. The vSphere web client is a requirement for the solution.D. Management of more than 5 hosts is a requirement for the solution. Answer: A Braindump2go New Released VCP550D Dump PDF Free Download, 285 Questions in all, Passing Your Exam 100% Easily!
