QUESTION 481 Your network contains an Exchange Server 2010 Service Pack 1 (SP1) organization named contoso.com. You need to identify which users received email messages from users in the fabrikam.com SMTP domain. Which tool should you use? A.

The Get-MessageTrackingLog cmdlet B. The Get-Message cmdlet C. The Get-MailboxStatistics cmdlet D. The Exchange Remote Connectivity Analyzer Answer: A QUESTION 482 Drag and Drop Question You have an Exchange Server 2010 Service Pack 1 (SP1) organization. Users connect to the organization from Outlook Web App by using the webmail.contoso.com fully qualified domain name (FQDN). You need to recreate the OWA virtual directory on a server that runs Exchange Server 2010 SP1. The solution must ensure that users can connect to Outlook Web App by using the webmail.contoso.com FQDN. What should you do? To answer, move the 3 appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

**QUESTION 483**Your network contains an Active Directory domain named contoso.com. The domain contains an Exchange Server 2010 Service Pack 1 (SP1) organization. You need to ensure that all the members of a mail-enabled group named Sales can modify the contents of a mail-enabled public folder named Folder1. What should you do? A. From Active Directory Users and Computers, add the Sales group to the Public Folder management role group. B. From the Exchange Management Shell, run the Add-PublicFolderClientPermission cmdlet. C. From the Exchange Management Shell, run the Set-MailPublicFolder cmdlet. D. From Active Directory Users and Computers, modify the permissions of the Sales group. Answer: A

**QUESTION 484**You have an Exchange Server 2010 Service Pack 1 (SP1) server that contains a single mailbox database. All users run Microsoft Outlook and Outlook Web App (OWA). You discover that the users cannot restore e-mail messages from the Recover Deleted Items folder. You need to ensure that the users can restore e-mail messages from the Recover Deleted Items folder. What should you do? A. From the Exchange Management Shell, create a retention policy, and then assign the policy to all of the users. B. From the Exchange Management Console, modify the properties of the Mailbox server object. C. From the Exchange Management Console, modify the properties of the mailbox database. D. From the Exchange Management Shell, create a management role, and then assign the role to all of the users. Answer: C

**QUESTION 485**Your network contains an Active Directory domain named contoso.com. The domain contains an Exchange Server 2010 Service Pack 1 (SP1) organization. A partner company named Fabrikam, Inc., has an Active Directory domain named fabrikam.com. The fabrikam.com domain contains an Exchange Server 2010 SP1 organization. All client computers in contoso.com and fabrikam.com have Microsoft Outlook 2010 installed. You create a federated trust. An administrator off fabrikam.com also creates a federated trust. You need to ensure that users in contoso.com can share their calendar information with users in fabrikam.com. What should you do? A. From the Mailbox node under Organization Configuration, modify the default sharing policy. B. Establish a forest trust between contoso.com and fabrikam.com. Implement the InterOrg Replication utility. C. From the Organization Configuration node in the Exchange Management Console (EMC), create an organization relationship. D. From the Group Policy Management console, add the Outlook 2010 administrative templates. Deploy changes to the Trust Center settings on all of the client computers. Answer: C

**QUESTION 486**Your company has offices in New York and Montreal. Each office is configured as an Active Directory site. You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains five servers. The servers are configured as shown in the following table. Each Mailbox server contains two mailbox databases. All users have a mailbox on their local Mailbox server. Server3 contains a public folder database. You create a new offline address book (OAB) for each office. You need to ensure that the users in each office download the OAB created for their respective office. What should you modify?

Server name	Server role	Server site
Server1	Client Access Hub Transport	New York
Server2	Mailbox	Montreal
Server3	Mailbox	New York
Server4	Mailbox	Montreal
Server5	Edge Transport	New York

A. An Attachment Filter agent B. The Autodiscover DNS record C. The mailbox features D. The EWS virtual directory E. The email address policy F. The Client Access array G. The Exchange ActiveSync mailbox policy H. The mailbox databases I. The Outlook Web App mailbox policy Answer: H

**QUESTION 487**You are the administrator of an Exchange Server 2003 organization named contoso.com. You need to deploy Exchange Server 2010 Service Pack 1 (SP1) to the network. What should you do first? A. From the Exchange Server 2010 installation directory, run setup /preparelegacyexchangepermissions. B. Add the computer accounts of the Exchange Server 2003 servers to the Organization Management universal security group. C. Add the computer accounts of the Exchange Server 2003 servers to the Delegated Setup universal security group. D. Add the computer accounts of the Exchange Server 2003 servers to the Exchange Trusted Subsystem universal security group. Answer: C

**QUESTION 488**You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The SMTP domain for the organization is contoso.com. You enable the Exchange anti-spam features. You need to ensure that the Exchange organization automatically rejects all email messages that have a spam confidence level (SCL) that is higher than 5. What should you do? A. From the Exchange Management Shell, run the Set-OrganizationConfig cmdlet. B. From the Exchange Management Shell, run the New-JournalRule cmdlet. C. From the Exchange Management Console (EMC), modify the Sender Filter agent. D. From the Exchange Management Shell, run the New-TransportRule cmdlet. Answer: B

**QUESTION 489**Your network contains an Exchange Server 2010 Service Pack 1 (SP1) organization. You need to identify which users sent email messages to a user named User1 during the past week. Which tool should you use? A. The Test-Mailflow cmdlet B. The Exchange Remote Connectivity Analyzer C. The Exchange Control Panel (ECP) D. The Get-LogonStatistics cmdlet Answer: A

**QUESTION 490**You have an Exchange Server 2010 Service Pack 1 (SP1) organization. The organization contains five servers. The servers are configured as shown in the following table. All users access their mailbox by using Microsoft Outlook 2010. You need to identify the 50 largest mailboxes in Mailbox Database 1. The solution

must use the minimum amount of administrative effort. Which cmdlet should you run?

Server name	Server role	Server configuration
Server1	Mailbox	Mailbox Database 1
Server2	Hub Transport	Not applicable
Server3	Client Access	Not applicable
Server4	Client Access	Not applicable
Server5	Edge Transport	Not applicable

A. Get-MessageB. Test-OutlookWebServicesC. Test-MapiConnectivityD. Test-SmtpConnectivityE.  
Get-MailboxDatabaseF. Test-MRSHealthG. Get-TransportServerH. Test-MailFlowI. Get-MailboxFolderStatisticsJ.  
Test-ServiceHealthK. Get-MailboxStatistics Answer: C Guaranteed 100% Microsoft 70-662 Exam Pass OR Full Money Back!
