DRAG DROP You have an on-premises network that you plan to connect to Azure by using a site-to-site VPN. In Azure, you have an Azure virtual network named VNet1 that uses an address space of 10.0.0.0/16. VNet1 contains a subnet named Subnet1 that uses an address space of 10.0.0.0/24. You need to create a site-to-site VPN to Azure. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select. Answer: New Question You have an Azure subscription named Subscription1 that contains two Azure networks named VNet1 and VNet2. VNet1 contains a VPN gateway named VPNGW1 that uses static routing. There is a site-to-site VPN connection between your on-premises network and VNet1. On a computer named Client1 that runs Windows 10, you configure a point-to-site VPN connection to VNet1. You configure virtual network peering between VNet1 and VNet2. You verify that you can connect to VNet2 from the on-premises network. Client1 is unable to connect to VNet2. You need to ensure that you can connect Client1 to VNet2. What should you do? A. Select Allow gateway transit on VNet1. B. Download and re-install the VPN client configuration package on Client1. C. Enable BGP on VPNGW1. D. Select Allow gateway transit on VNet2. Answer: B Explanation: References:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-about-point-to-site-routing>New Question **HOTSPOT** Your company has offices in New York and Los Angeles. You have an Azure subscription that contains an Azure virtual network named VNet1. Each office has a site-to-site VPN connection to VNet1. Each network uses the address spaces shown in the following table: You need to ensure that all Internet-bound traffic from VNet1 is routed through the New York office. What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. Answer: New Question You have a Microsoft SQL Server Always On availability group on Azure virtual machines. You need to configure an Azure internal load balancer as a listener for the availability group. What should you do? A. Create an HTTP health probe on port 1433. B.

Set Session persistence to Client IP. C. Set Session persistence to Client IP and protocol. D. Enable Floating IP. Answer: D Explanation: References: <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/sql/virtual-machines-windows-portal-sql-alwayson-int-listener>New Question

You set the multi-factor authentication status for a user named admin1@contoso.com to Enabled. Admin1 accesses the Azure portal by using a web browser. Which additional security verifications can Admin1 use when accessing the Azure portal? A. an app password, a text message that contains a verification code, and a verification code sent from the Microsoft Authenticator app B. a phone call, a text message that contains a verification code, and a notification or a verification code sent from the Microsoft Authenticator app C. a phone call, an email message that contains a verification code, and a text message that contains an app password D. an app password, a text message that contains a verification code, and a notification sent from the Microsoft Authenticator app Answer: B Explanation: References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-authentication-methods>New Question You have an Azure Active Directory (Azure AD) tenant. All administrators must enter a verification code to access the Azure portal. You need to ensure that the administrators can access the Azure portal only from your on-premises network. What should you configure? A. the default for all the roles in Azure AD Privileged Identity Management B. an Azure AD Identity Protection user risk policy C. an Azure AD Identity Protection sign-in risk policy D. the multi-factor authentication service settings Answer: D Explanation: References: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-mfasettings>New Question

You have an Azure subscription named Subscription1 that contains a virtual network named VNet1. VNet1 is in a resource group named RG1. Subscription1 has a user named User1. User1 has the following roles: Reader Security Admin Security Reader You need to ensure that User1 can assign the Reader role for VNet1 to other users. What should you do? A. Assign User1 the Owner role for VNet1. B. Assign User1 the Network Contributor role for VNet1. C. Remove User1 from the Security Reader and Reader roles for Subscription1. Assign User1 the Contributor role for Subscription1. D. Remove User1 from the Security Reader and Reader roles for Subscription1. Answer: A New Question **HOTSPOT** You are creating an app that uses Event Grid to connect with other services. Your app's event data will be sent to a serverless function that checks compliance. This function is maintained by your company. You write a new event subscription at the scope of your resource. The event must be invalidated after a specific period of time. You need to configure Event Grid to ensure security. What should you implement? To answer, select the appropriate

options in the answer area. NOTE: Each correct selection is worth one point. Answer: Explanation: References:

<https://docs.microsoft.com/en-us/azure/event-grid/security-authentication>New QuestionYou are building a custom Azure function app to connect to Azure Event Grid.You need to ensure that resources are allocated dynamically to the function app. Billing must be based on the executions of the app.What should you configure when you create the function app?A. the Windows operating system and the App Service plan hosting planB. the Docker container and an App Service plan that uses the B1 pricing tierC. the Windows operating system and the Consumption plan hosting planD. the Docker container and an App Service plan that uses the S1 pricing tierAnswer: C Explanation: References:

<https://docs.microsoft.com/en-us/azure/azure-functions/functions-scale>New QuestionYou have an Azure Service Bus.You need to implement a Service Bus queue that guarantees first-in-first-out (FIFO) delivery of messages.What should you do?A. Enable partitioningB. Enable duplicate detectionC. Set the Lock Duration setting to 10 secondsD. Enable sessionsE. Set the Max Size setting of the queue to 5 GBAnswer: D Explanation: References:

<https://docs.microsoft.com/en-us/azure/service-bus-messaging/service-bus-azure-and-service-bus-queuescompared-contrasted>New QuestionDRAG DROPYou are developing a web app that uses a REST interface to connect to Azure Storage with HTTPS. This app uploads and streams video content that can be accessed from anywhere in the world.You have different storage requirements for each part of the app. A hierarchical namespace must be created.Which storage services should you implement? To answer, select the appropriate services to the correct actions. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.NOTE: Each correct selection is worth one point.
