**QUESTION 23**You create an Azure Storage account named contosostorage. You plan to create a file share named data. Users need to map a drive to the data file share from home computers that run Windows 10. Which port should be open between the home computers and the data file share? A. 80 B. 443 C. 445 D. 3389  
**Answer:** C  
**Explanation:** Ensure port 445 is open: The SMB protocol requires TCP port 445 to be open; connections will fail if port 445 is blocked.  
**References:**  
<https://docs.microsoft.com/en-us/azure/storage/files/storage-how-to-use-files-windows>

**QUESTION 24**You have an Azure Active Directory (Azure AD) tenant named contosocloud.onmicrosoft.com. Your company has a public DNS zone for contoso.com. You add contoso.com as a custom domain name to Azure AD. You need to ensure that Azure can verify the domain name. Which type of DNS record should you create? A. RRSIG B. PTR C. DNSKEY D. TXT  
**Answer:** D  
**Explanation:** Create the TXT record. App Services uses this record only at configuration time to verify that you own the custom domain. You can delete this TXT record after your custom domain is validated and configured in App Service.  
**References:**  
<https://docs.microsoft.com/en-us/azure/dns/dns-web-sites-custom-domain>

**QUESTION 25**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups. Another administrator plans to create several network security groups (NSGs) in the subscription. You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks. Solution: From the Resource providers blade, you unregister the Microsoft.ClassicNetwork provider. Does this meet the goal? A. Yes B. No  
**Answer:** B  
**Explanation:** Resource providers blade, you unregister the Microsoft.ClassicNetwork provider. Does this meet the goal? A. Yes B. No  
**Answer:** A  
**Explanation:** Resource policy definition used by Azure Policy enables you to establish conventions for resources in your organization by describing when the policy is enforced and what effect to take. By defining conventions, you can control costs and more easily manage your resources. **References:** <https://docs.microsoft.com/en-us/azure/azure-policy/policy-definition>

**QUESTION 27**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups. Another administrator plans to create several network security groups (NSGs) in the subscription. You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks. Solution: You create a resource lock, and then you assign the lock to the subscription. Does this meet the goal? A. Yes B. No  
**Answer:** B  
**Explanation:** How can I freeze or lock my production/critical Azure resources from accidental deletion? There is way to do this with both ASM and ARM resources using Azure resource lock. **References:**  
<https://blogs.msdn.microsoft.com/azureedu/2016/04/27/using-azure-resource-manager-policy-and-azure-lock-to-control-your-azure-resources/>

**QUESTION 28**You have an Azure Active Directory (Azure AD) domain that contains 5,000 user accounts. You create a new user account named AdminUser1. You need to assign the User administrator administrative role to AdminUser1. What should you do from the user account properties? A. From the Directory role blade, modify the directory role. B. From the Groups blade, invite the user account to a new group. C. From the Licenses blade, assign a new license.  
**Answer:** A  
**Explanation:** Assign a role to a user Sign in to the Azure portal with an account that's a global admin or privileged role admin for the directory. Select Azure Active Directory, select Users, and then select a specific user from the list. For the selected user, select Directory role, select Add

role, and then pick the appropriate admin roles from the Directory roles list, such as Conditional access administrator. Press Select to save. References:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-users-assign-role-azure-portal>

**QUESTION 29** You have an Active Directory forest named contoso.com. You install and configure Azure AD Connect to use password hash synchronization as the single sign-on (SSO) method. Staging mode is enabled. You review the synchronization results and discover that the Synchronization Service Manager does not display any sync jobs. You need to ensure that the synchronization completes successfully. What should you do? A. From Synchronization Service Manager, run a full import. B. Run Azure AD Connect and set the SSO method to Pass-through Authentication. C. From Azure PowerShell, run Start-AdSyncSyncCycle -PolicyType Initial. D. Run Azure AD Connect and disable staging mode. Answer: D Explanation: Staging mode must be disabled. If the Azure AD Connect server is in staging mode, password hash synchronization is temporarily disabled. References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-troubleshoot-password-has-h-synchronization#no-passwords-are-synchronized-troubleshoot-by-using-the-troubleshooting-task>

**QUESTION 30** You have an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains 100 user accounts. You purchase 10 Azure AD Premium P2 licenses for the tenant. You need to ensure that 10 users can use all the Azure AD Premium features. What should you do? A. From the Groups blade of each user, invite the users to a group. B. From the Licenses blade of Azure AD, assign a license. C. From the Directory role blade of each user, modify the directory role. D. From the Azure AD domain, add an enterprise application. Answer: B Explanation: To assign a license, under Azure Active Directory > Licenses > All Products, select one or more products, and then select Assign on the command bar. References:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/license-users-groups> **QUESTION 31** You download an Azure Resource Manager template based on an existing virtual machine. The template will be used to deploy 100 virtual machines. You need to modify the template to reference an administrative password. You must prevent the password from being stored in plain text. What should you create to store the password? A. Azure Active Directory (AD) Identity Protection and an Azure policy B. a Recovery Services vault and a backup policy C. an Azure Key Vault and an access policy D. an Azure Storage account and an access policy Answer: C Explanation: You can use a template that allows you to deploy a simple Windows VM by retrieving the password that is stored in a Key Vault. Therefore the password is never put in plain text in the template parameter file. References:

<https://azure.microsoft.com/en-us/resources/templates/101-vm-secure-password/> **QUESTION 32** Your company registers a domain name of contoso.com. You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10. You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address. You need to resolve the name resolution issue. Solution: You modify the name server at the domain register. Does this meet the goal? A. Yes B. No Answer: B

**QUESTION 33** Your company registers a domain name of contoso.com. You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10. You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address. You need to resolve the name resolution issue. Solution: You add an NS record to the contoso.com zone. Does this meet the goal? A. Yes B. No Answer: A Explanation: Before you can delegate your DNS zone to Azure DNS, you need to know the name servers for your zone. The NS record set contains the names of the Azure DNS name servers assigned to the zone. References:

<https://docs.microsoft.com/en-us/azure/dns/dns-delegate-domain-azure-dns> **!!!RECOMMEND!!!1.** **[2019 Latest Braindump2go AZ-102 Exam Dumps (PDF & VCE) Instant Download:** <https://www.braindump2go.com/az-102.html> **2.** **[2019 Latest Braindump2go AZ-102 Study Guide Video Download:** YouTube Video: [YouTube.com/watch?v=FA6SDwQiVLc](https://www.youtube.com/watch?v=FA6SDwQiVLc)
