However, you want the screens to shut off after a certain period of time if the computers are not being used.You need to configure and apply a standard power configuration scheme for the 10 help desk computers on your network.Which four Actions should you perform in sequence? Answer: Explanation:You can use the Powercfg.exe tool to control power settings and configure computers to default to Hibernate or Standby modes.In this question, we use POWERCFG /X on one help desk computer to modify the power scheme to meet our requirements. After configuring the required settings, we can export the power scheme settings to a file by using POWERCFG /EXPORT.We can then import the power scheme from the file on each of the remaining help desk computers by using POWERCFG /IMPORT. After importing the power scheme on the remaining computers, we need to set the new power scheme to be the active power scheme by using POWERCFG /S.References:
