Download:<https://drive.google.com/drive/folders/0B75b5xYLjSSNRU9xWGk1cFJiaTg?usp=sharing>New QuestionScenario:The

following four questions concern the Nexus 7010' s which are configured as a vPC pair at the core of a Data Center network. You can utilize all the available show commands to answer the Questions Access to the running-configuration is not allowed.Instructions:

Enter NX-OS commands on 7K-3 and 7K-4 to verify network operation and answer four multiplechoice questionsTHIS TASK

DOES NOT REQUIRE DEVICE CONFIGURATION.Click on the switch to gain access to the console of the switch. No console or

enable passwords are required.To access the multiple-choice questions, click on the numbered boxes on the left of the top panel.

There are four multiple-choice questions with this task Be sure to answer all four questions before selecting the Next button

Topology: Without having access to Fabric Path show commands, how can you confirm whether Fabric Path is configured on the

two vPC peer 7K-3 and 7K-4?A. Show vpc would not indicate any downstream virtual port channel vPC parameter with active

VLANsB. Show vpc role on both 7K-3 and 7K-4 would indicate their role as primaryC. Show interface would indicate

port-channel 1 and 2 would use a port mode of Fabric path 0.D. Show hsrp would be blank, since FHRP is not supported or

required when using Fabric PathAnswer: CNew QuestionRefer to the exhibit. You have a suboptimal outbound routing issue in the

datacenter.Which two options you can use to resolve the issue? (Choose two) A. On the OTV VDC, configure an OTV MAC

route filter that prevent the virtual FHRP MAC address from being announced to other sites.B. On the OTV edge devices,

configure a VACL that prevents FHRP hellos from being forwarded on the overlay.C. Configure the same FHRP priority on all the

OTV edge devices in both sites.D. Remove the VLAN from which FHRP hellos are sent from the extended VLAN range.E. On

the OTV edge devices, configure an IP ACL that prevents hosts from reaching the FHRP master router on the other site.Answer: AB

Explanation:<https://supportforums.cisco.com/t5/data-center-documents/cisco-otv-and-fhrp-isolation/ta-p/3136485>"Point

number 1 is accomplished using a VLAN ACL on the OTV Edge Devices to filter the respective traffic depending on which

FHRP protocol used. To prevent the virtual MAC addresses from causing MAC moves and allow for a cleaner design, an

OTV route-map must be configured. This route-map must match the virtual MAC of the FHRP protocol used. You will need

to make MAC ACL and IP ACL extended. In case of Nexus switches you can use VACLs for this."New QuestionWhat are two

prerequisite to running the Smart Call Home feature on a Cisco nexus 6000 series switch? (Select two)A. The switch must have

SMTP access to an email serverB. The switch must have public management IP addressC. The switch must have SMTP access

to a Cisco.com email serverD. The switch must have an active service contractE. The switch must be configured to use an email

address from the @cisco.comAnswer: ADEExplanation:You must have e-mail server connectivity.You must have access to contact

name (SNMP server contact), phone, and street address information.You must have IP connectivity between the switch and the

e-mail server.You must have an active service contract for the device that you are configuring.New QuestionScenario:The following

four questions concern the Nexus 7010' s which are configured as a vPC pair at the core of a Data Center network. You can utilize

all the available show commands to answer the Questions Access to the running-configuration is not allowed.Instructions:Enter

NX-OS commands on 7K-3 and 7K-4 to verify network operation and answer four multiplechoice questionsTHIS TASK DOES

NOT REQUIRE DEVICE CONFIGURATION.Click on the switch to gain access to the console of the switch. No console or enable

passwords are required.To access the multiple-choice questions, click on the numbered boxes on the left of the top panel.

There are four multiple-choice questions with this task Be sure to answer all four questions before selecting the Next buttonTopology: Which

interface is used for vPC keepalives on both 7000's?A. Port-channel 1B. Port-channel 2C. Port-channel 100D. Mgmt0E.

Ethernet 2/1F. Ethernet 2/3Answer: DNew QuestionYou have a Cisco Nexus 7700 Series switch on which the graceful which the

graceful restart feature is disable, you are configuring BGP.Which command should you run to enable the graceful restart feature?A.

Switch(config-router)# graceful-restart restart-timeB. Switch(config-router)# graceful-restart grace-periodC.

Switch(config-router)# graceful-restart-helperD. Switch(config-router)# graceful-restartAnswer: DExplanation:

[https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus7000/sw/unicast/command/reference/n7k\\_unicast\\_cmds/13\\_c](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus7000/sw/unicast/command/reference/n7k_unicast_cmds/13_cmds_g.html)

[mds\\_g.html](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus7000/sw/unicast/command/reference/n7k_unicast_cmds/13_cmds_g.html)To enable the graceful restart and the graceful restart helper capability, use the graceful-restart or the

graceful-restart-helper router BGP configuration mode command. To disable graceful restart and the graceful restart helper

capability, use the no form of this command.graceful-restart [ restart-time restart-time | stalepath-time stalepath-time ]

graceful-restart-helperno graceful-restart { restart-time restart-time | stalepath-time stalepath-time } | graceful-restart-helperNew

QuestionDrag and Drop QuestionDrag and drop the types of spanning tree ports from the left onto the correct descriptions on the

right. Answer: Explanation:edge ----> transitions to the forwarding state immediately (

<https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/configuration/guide/cli/CLIConfigurationGuide/SpawningEnhanced.html#20968>) The edge port interface immediately transitions to the forwarding state, without moving through the blocking or learning states.Edge trunk ----> supports 802.1Q to a host immediately (

<https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/configuration/guide/cli/CLIConfigurationGuide/SpawningEnhanced.html>) Spanning-tree port type edge trunk -This command explicitly enables edge behavior on the trunk port.802.1Q is the trunking protocol.network ----> enables Bridge Assurance (

<https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/configuration/guide/cli/CLIConfigurationGuide/SpawningEnhanced.html>) spanning-tree port type network -This command explicitly configures the port as a network port. If you enable Bridge Assurance globally, it automatically runs on a spanning tree network port.normal ----> moves through the regular STP transitionsNew QuestionWhich two Nexus family linecards allow the configuration of features regarding LISP,OTV and MPLS? (Choose two.)A. B1B. F1C. F2D. M2E. F3Answer: DEExplanation:

<https://www.cisco.com/c/en/us/products/switches/nexus-7000-series-switches/models-comparison.html#~tab-m-seriesOnlyM2andF3supporttheseprotocols>.New QuestionWhen configuring PIM to support an OTV implementation, which PIM configuration is supported in Cisco NX-OS?

A. SwitchA(config-if)# ip pim dense-modeB. SwitchA(config-if)# ip pim ssm defaultC. SwitchA(config-if)# ip pim sparse-dense-modeD. SwitchA(config-if)# ip pim sparse-modeAnswer: DNew QuestionRefer to the exhibit. Which two descriptions of the switch are true? (Choose two) A. It shuts down any edge port that receives a BPDUB. It shuts down any port that receives a BPDUC. If a port in the range of e1/1-24 receives a BPDU, the port is moved to the errdisable state.D. It prevents edge devices from sending or receiving BPDUs globallyE. It prevents edge devices from sending or receiving BPDUs on e1/1-24 onlyAnswer: CDNew QuestionRefer to the exhibit. What is the result of the configuration?

A. A MAC address of 11c0.adaa.3213 is denied.B. The MAC ACL is applied to VLANs 10-120.C. The MAC ACL denies a MAC address of 1122.2847.4591 on VLAN 101.D. A MAC address of 11c0.adaa.3213 is permitted.Answer: DNew QuestionWhen configuring HSRP on IPv6-enabled interfaces, which two commands are required? (Choose two)A. SwitchA(config-if)# hsrp version 2B. SwitchA(config-if)# hsrp <group-number> ipv6C. SwitchA(config-if)# key 6D. SwitchA(config-if)# standby 6 preemptE. SwitchA(config-if)#priority <level>Answer: ABExplanation:

[https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/unicast/521\\_N11/cisco\\_n5k\\_layer3\\_ucast\\_cfg\\_rel\\_521\\_N1\\_1/3\\_hsrp.pdf](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/nexus5000/sw/unicast/521_N11/cisco_n5k_layer3_ucast_cfg_rel_521_N1_1/3_hsrp.pdf)1. configure terminal2. interface type number3. ipv6 ipv6-address/length4. hsrp version 25. hsrp

group-number ipv66. ip ipv6-address [secondary]7. ip autoconfig8. no shutdown9. show hsrp [group group-number] [ipv6]10. copy running-config startup-config!!!RECOMMEND!!!1.[2019 Latest Braindump2go 300-165 Exam Dumps (PDF & VCE) Instant
