QUESTION 171 You are developing a WCF service. The service includes an operation names GetProduct. You need to ensure that GetProduct will accept a POST request and will indicate that the returned data is XML. Which two actions should you perform (Choose 2) A. Add the WebGet attribute to the service contract. B. Set

WebOperationContext.Current.OutgoingRequest.ContentType to "text/xml" in the GetProduct method. C. Add the WebInvoke attribute to the service contract. D. Set WebOperationContext.Current.OutgoingResponse.ContentType to "text/xml" in the GetProduct method. Answer: CD QUESTION 172 You are debugging an ASP.NET web page. The page includes the following method: [WebMethod] public string GetServerString() { ... } The page also includes the following markup: <asp:ScriptManager ID="sm1" runat="server" /> The following JavaScript code is used to call the GetServerString method: function GetString() {

PageMethods.GetServerString(callbackMethod); } function callbackMethod(str) { ... } The AJAX calls to the GetServerString method are failing. You need to ensure that the AJAX call to the GetServerString method succeeds. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.) A. Set the EnablePageMethods property of the ScriptManager control to true. B. Set the EnablePartialRendering property of the ScriptManager control to true. C. Change the WebMethod attribute of the GetServerString method to WebMethod(EnableSession=true). D. Declare the GetServerString method as static. Answer: AD QUESTION 173 You are developing an ASP.NET web page. The page includes a DropDownList control. You need to call a client-side function when the user changes the value of the control. Which event should you handle? A. Click B. SelectedIndexChanged C. Change D. Select Answer: C QUESTION 174 You are developing an ASP.NET MVC 2 application. You create a view that will be returned by action methods in multiple controllers. You need to place the view in the appropriate folder. To which subfolder within the Views folder should you add the view? A. Master B. Default C. Shared D. Common Answer: C QUESTION 175 You are debugging an ASP.NET Web application by using the Visual Studio debugger. The application is incorrectly handling a SQL Exception on the login page. You need to break execution where the exception is thrown. What should you do? A. Enable the User-unhandled option for SqlException in Visual Studio Exception configuration. B. Set the value of the customErrors element's mode attribute to ?on? in the web.config file. C. Manually attach the Visual Studio debugger to Internet Explorer D. Enable the thrown option for SqlException in Visual Studio exception configuration. Answer: D QUESTION 176 You create a Windows Communication Foundation (WCF) service and deploy it with wsHttpBinding and message security enabled. You

create an intermediate WCF service for logging messages sent to the primary service. The intermediate service is called via endpoint behaviour. The primary service is receiving malformed data from a client application. You need to enable inspection of the malformed data and prevent message tampering. What do you do? A. Specify a protection level of None in the contract for the intermediate service. Disable message and transport security from the client application configuration file. B. Specify a protection level of Sign in the contract for the intermediate service. Disable transport security from the client application configuration file. C. Modify the binding on the intermediate service to use netNamedPipeBinding D. Modify the binding on the intermediate service to use webHttpBinding Answer: B QUESTION 177 You need to ensure that when the button is clicked, both update panels update the tim without generating a postback. What should you do? A. Add the following marktip to UpdatePanel1. <Triggers> <asp:PostBackTrigger ControlID="btnSave" /> </Triggers> B. Set the UpdateMode property for the UpdatePanel2 to "Always" C. Add the following markup to UpdatePanel2 <Triggers> <asp:AsyncPostBackTrigger ControlID="btnSave" EventName="Click" /> </Triggers> D. Set the UpdateMode property for UpdatePanel2 to "Conditional" Answer: C QUESTION 178 You are developing an ASP.NET MVC2 view and controller. The application includes a class names Employee that has a LastName property. The controller requires an action method that will insert an Employee instance into a database. You need to ensure that the data that is submitted is an Employee instance and that a LastName value is given. What should you do? A. Add a ValidationMessage helper method immediately after the view's last name TextBox. Define the action method as follows. public ActionResult Create(FormCollection employeeToCreate) {...} B. Add the Required attribute to the LastName property. Define the action method as follows. public ActionResult Create(FormCollection employeeToCreate) {...} C. Add the Required attribute to the LastName property. Define the action method as follows. public ActionResult Create(Employee employeeToCreate) {...} D. Add the ValidationMessage helper method immediately after the views last name TextBox. Define the action method as follows. public ActionResult Create(Employee employeeToCreate) {...} Answer: C QUESTION 179 You are developing an ASP.NET MVC 2 Web Application. You need to implement an asynchronous controller named AccountingController, and you must ensure that the export action required proper authorization. Which code segment should you use? A. public class AccountingController : Controller { public void ExportAsync() {...} [Authorise] public void ExportCompleted() {...} } B. public class AccountingController : AsyncController { [Authorise] public void ExportAsync() {...} public void ExportCompleted() {...} } C. public class AccountingController : AsyncController { [Authorise] public void Export() {...} } D. public class AccountingController : Controller { [Authorise] public void ExportAsync() {...} [Authorise] public void ExportCompleted() {...} } Answer: B QUESTION 180 You are developing an ASP.NET Web page that uses jQuery validation. The user should enter a valid email address in a text box that has ID txtEmail. The page must display "E-Mail address required" when the user does not enter an address and "Invalid e-mail address" when the user enters an address that is not formatted properly. You need to ensure that the appropriate error message is displayed when the text box does not contain a valid e-mail address. Which two code segments should you add? (Choose 2) A. txtEmail: { messages: { required: "E-mail address required", email: "Invalid e-mail address" } } B. messages: { txtEmail: { required: "E-mail address required", email: "Invalid e-mail address" } } C. txtEmail: { rules: { required: true email: true } } D. rules: { txtEmail: { required: true email: true } } Answer: BD For those who feel the overwhelming anxiety before their 70-515 exam, Braindump2go Latest updated 70-515 Exam Dumps will help you Pass 100% in a short time preparation! 70-515 Exam Dumps PDF & VCE Full Version Instant Download!
