QUESTION 46 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question. You have a computer named Computer1 that runs Windows 10. Computer1 has the Windows Assessment and Deployment Kit (Windows ADK) installed. You create the working directories for the customization of a Windows Preinstallation Environment (Windows PE) image. You need to add scripting support to Windows PE. What should you do first? A. Mount the Install.wim file. B. Mount the Boot.wim file. C. Modify the Winpeshl.ini file. D. Create an answer file. E. Modify the Windows.ini file. F. Create a provisioning package. G. Load a catalog file (.clg). H. Create a cabinet file (.cab). Answer: B

QUESTION 47 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You mount an image of Windows 10. You download 10 Windows 10 update packages to separate folders. Some of the update packages contain dependencies to the other update packages. You are unaware of the specific dependencies. You need to add all the update packages to the image in the correct order. Solution: You copy all the update to the same folder. You run dism.exe /Add-Package once and specify the /PackagePath parameter once. Does this meet the goal? A. Yes B. No Answer: B

Explanation: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/servicing-the-image-with-windows-updates-sxs>

QUESTION 48 You have an image of Windows 10. You plan to deploy the image to a new computer. You run sysprep.exe /generalize /oobe /shutdown, and then you capture the image. You deploy the image to the computer. You add an application and a driver to the online image. You need to prepare the computer for the end user. Which command should you run? A. sysprep.exe /oobe B. sysprep.exe /generalize /audit C. dism.exe /Apply-Image D. imagex.exe /capture Answer: A

QUESTION 49 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have an image of Windows 10 for a new desktop computer model. The computer uses specific out-of-box device drivers stored in the INF format. You need to update the drivers by using an answer file. Which parameter should you specify when you run dism.exe? A. /Add-Capability B. /Add-Driver C. /Add-Package D. /Add-ProvisionedAppxPackage E. /Apply-CustomDataImage F. /Apply-Image G. /Apply-Unattend H. /Export-Image Answer: G

Explanation: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/dism-unattended-servicing-command-line-options>

QUESTION 50 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You mount an image of Windows 10. You download 10 Windows 10 update packages to separate folders. Some of the update packages contain dependencies to the other update packages. You are unaware of the specific dependencies. You need to add all the update packages to the image in the correct order. Solution: You run dism.exe /Get-Packages, and then you pipe the output to dism.exe /Add-Package. Does this meet the goal? A. Yes B. No Answer: B

QUESTION 51 You plan to deploy a Windows Preinstallation Environment (Windows PE) image. Your company uses a graphical application to help installers choose an installation method for Windows 10. The application must be started by using the following command. installerGui.bat /Full /Interactive You need to configure Windows PE to run the graphical application during startup. Which two

actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.  
A. Create a [boot loader] section in the INI file and add the command.  
B. Create a Boot.ini file in the root folder of the image.  
C. Create a Winpeshl.ini file in the WindowsSystem32 folder of the image.  
D. Create a [LaunchApp] section in the INI file and add the command.  
E. Create a [LaunchApps] section in the INI file and add the command.  
Answer: CE
