SetQuestion: 1 You manage a Microsoft System Center Virtual Machine Manager (SCVMM) environment. You plan to create virtual machine (VM) networks and IP address pools. You need to ensure that VM networks are segmented.Solution: You create a VM network with the No Isolation option. Does the solution meet the goal?A. YesB. No Answer: B Question: 2 You manage a Microsoft System Center Virtual Machine Manager (SCVMM) environment. You plan to createvirtual machine (VM) networks and IP address pools. You need to ensure that VM networks are segmented.Solution: You create a VM network and specify the Isolate using Hyper-V Network Virtualization option.Does the solution meet the goal?A. YesB. No Answer: A Question: 3 You manage a System Center Virtual Machine Manager (SCVMM) environment. You plan to create virtualmachine (VM) networks and IP address pools.You need to ensure that VM networks are segmented. Solution: You create Windows Firewall rules on the VMs. Does the solution meet the goal?A. YesB. No Answer: B Question: 4 Your company has two datacenters. You have Windows servers in both locations. The network that connectsthe datacenters has high bandwidth and low latency.You are designing a new virtual machine (VM) and storage environment based on servers that run WindowsServer 2016. You need to implement a solution that meets the following storage requirements:*Tolerates the failure of a single datacenter.*Ensures zero data loss in the event of a file system failure. Solution: You implement offloaded data transfers.Does the solution meet the goal?A. YesB. No Answer: B Question: 5 Your company has two datacenters. You have Windows servers in both locations. The network that connectsthe datacenters has high bandwidth and low latency.You are designing a new virtual machine (VM) and storage environment based on servers that run WindowsServer 2016. You need to implement a solution that meets the following storage requirements: Tolerates the failure of a single datacenter.Ensures zero data loss in the event of a file system failure. Solution: You implement Distributed File System Replication. Does the solution meet the goal?A. YesB. No Answer: B Question: 6 Your company has two datacenters. You have Windows servers in both locations. The network that connectsthe datacenters has high bandwidth and low latency.You are designing a new virtual machine (VM) and storage environment based on servers that run WindowsServer 2016. You need to implement a solution that meets the following storage requirements:*Tolerates the failure of a single datacenter.*Ensures zero data loss in the event of a file system failure.Solution: You implement a storage replica with synchronous replication. Does the solution meet the goal?A. YesB. No Answer: A Question: 7 You administer Microsoft System Center Virtual Machine Manager (SCVMM). You need to access the Network Controller diagnostic logs.Where should you view the logs?A. %programfiles%DiagnosticLogsB. %windir%SDNDiagnosticsC. %systemdrive%SDNDiagnosticsD. %systemroot%DiagnosticLogs Answer: C Question: 8 HOTSPOT? Microsoft Hyper-V host has a network interface card (NIC) named NIC1 that supports Remote DirectMemory Access (RDMA). You plan to install a second NIC at a later date.The Hyper-V host must have a virtual switch named vSwitch1. Switch Embedded Teaming (SET) must beenabled on the NIC.You need to ensure that you can use the same virtual switch when you add the second NIC.How should you complete the Windows PowerShell command? To answer, select the appropriate options inthe answer area.NOTE: Each correct selection is worth one point. **Answer Area**

New-VMSwitch
Set-VMSwitch
Enable-VMSwitchExtension
Enable-VMSwitchExtensionFeature
-VMSwitchExtensionFeature
-EnableEmbeddedTeaming
-EnableIov
-EnablePacketDirect

Answer:

Answer Area

New-VMSwitch

Set-VMSwitch

Enable-VMSwitchExtension

Get-VMSwitchExtensionConfiguration

-Name vSwitch1 -NetAdapterName "NIC1"

-VMSwitchExtensionFeature

-EnableEmbeddedTeaming

-EnableIov

-EnablePacketDirect

\$true

Question: 9 You deploy a Microsoft Hyper-V host server and install the Network Controller role. You need to modify the application settings of the Network Controller. Which Windows PowerShell cmdlet should you run? A. Set-NetworkControllerVirtualNetworkConfigurationB. Set-NetworkControllerC. Set-NetworkControllerNodeD. Set-NetworkControllerCluster Answer: B Question: 10 You manage Microsoft System Center Virtual Machine Manager (SCVMM). You plan to implement a software load balancer (SLB) Multiplexer (MUX). You need to configure the Microsoft Hyper-V host servers to host the MUX. What should you do?A. Configure Windows Server Gateway.B. Install the SLB Host Agent on each Hyper-V host.C. Configure virtual machine resource metering.D. Configure a Remote Access Service gateway. Answer: B Explanation: References:<https://technet.microsoft.com/en-US/library/mt632286.aspx> Question: 11 DRAG DROP You manage Microsoft System Center Virtual Machine Manager (SCVMM). You plan to implement software load balancer (SLB) on Microsoft Hyper-V host servers by using an SLB Multiplexer (MUX). You identify the following requirements: Redirect all inbound traffic to the MUX. Ensure that all outbound network traffic bypasses the MUX. You need to configure the environment. Which components should you implement? To answer, drag the appropriate components to the correct traffic directions. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

BGP-enabled router

Hyper-V virtual switch

failover cluster

SLB Host Agent

Traffic direction	Component
Inbound	<div>BGP-enabled router</div>
Outbound	<div>Component</div>

Answer:

Traffic direction	Component
Inbound	<div>BGP-enabled router</div>
Outbound	<div>Hyper-V virtual switch</div>
