http://technet.microsoft.com/en-us/library/fe56f0f3-0f28-4b0c-8adf-9982a710540a QUESTION 146Your company deploys System Center 2012 R2 Operations Manager.A network administrator deploys the Operations Manager agent to all of the internal servers that run Windows Server, and then configures notifications to be sent by email to several departmental groups.Two days later, a network administrator opens the Operations Manager console and discovers hundreds of alerts.The administrator closes all of the alerts in the console.You need to change the resolution state of the alerts that were closed.What should you do first? A.   From the Reporting workspace, select Microsoft Generic Report Library, and then select Alerts.B.   From the Authoring workspace, select Rules, and then set the scope to View all targets.C.   From the My Workspace workspace, create a new alert view.D.   From the Administration workspace, create a notification subscription. Answer: CExplanation:To set the resolution state for an alertIn the Operations console, click Monitoring.Click any view that displays alerts, such as Active Alerts. (Alert View will show you the alerts you want to change)Right-click an alert, point to Set Resolution State, and then click the desired resolution state.
http://technet.microsoft.com/en-us/library/hh212928.aspx QUESTION 147Your company has a private cloud that contains a System Center 2012 R2 infrastructure.You run applications virtually by using Hyper-V hosts. Each application has a dedicated virtual machine on a Hyper-V host.The Microsoft Monitoring Agent is deployed to all physical servers. Currently, all of the physical servers are monitored for memory, CPU, and disk space use.You need to monitor the memory, CPU, and disk space use of each application server.What should you do? A.   Deploy the Microsoft Monitoring Agent to each virtual machine.B.   Configure a new notification subscription for each Hyper-V host.C.   Deploy the Configuration Manager client to each virtual machine.D. Configure a new channel for each virtual machine. Answer: AExplanation:
http://www.server-log.com/blog/2013/12/2/installing-scom-agent-microsoft-monitoring-agent-from-system.html QUESTION 148 Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1 and member servers named Server1 and Server2. Server1 has System Center 2012 R2 Operations Manager installed. Server2 has System Center 2012 R2 Orchestrator installed. Orchestrator has the System Center Integration Pack for System Center 2012 R2 Operations Manager installed.In Operations Manager, you have a monitor named Monitor1 that triggers an alert named Alert1.You need to ensure that when Alert1 is triggered, a custom runbook starts.Which two actions should you perform from Orchestrator? Each correct answer presents part of the solution. A.   Configure a filter of PrincipalName equals Alert1.B.   Configure a filter of MonitorObjectName equals Monitor1.C.   Add the Get Alert activity.D.   Add the Monitor Alert activity and configure triggers for the alert.E.   Configure a filter of Name equals Alert1. Answer: BDExplanation:
http://technet.microsoft.com/en-us/library/hh830707.aspx QUESTION 149You have a System Center 2012 R2 infrastructure that has Orchestrator and Service Manager installed.Integration between Orchestrator and Service Manager is configured.You need to ensure that when a change request is made in Service Manager, the following requirements are met:- The ticket number is logged to a file.- The file contains the ticket numbers for every change request. - Each time a ticket number is logged to the file, an email message is sent to an administrator.Which activities should you use in a runbook? A.   Monitor Object, Insert Line, and Send Email B.   Get Activity, Append Line, and Send EmailC.   Monitor State, Insert Line, and Send EmailD.   Monitor Object, Append Line, and Send Email Answer: DExplanation:http://technet.microsoft.com/en-us/library/hh549275.aspxYou do not know when the action should take place. So you need the monitor to trigger your action (not the other way around). The get activity is used when a runbook is already running.http://technet.microsoft.com/en-us/library/hh206072.aspxAbove states to use the Append Line command for logging purposes (which is not described as such for the Insert Line command)."Use the Append Line activity to append lines to a log file to create audits trails of runbooks." QUESTION 150Your company has a main office and 10 branch offices.The network contains an Active Directory forest named contoso.com. Each office contains domain controllers.You have a System Center 2012 R2 infrastructure that has Operations Manager and ServiceManager installed.Each office has multiple VLANs. All switches are managed switches.Users in the branch offices occasionally call the help desk to report that they cannot access some of the network

resources in the main office.You need to ensure that all of the ports on the switches can be monitored by using Operations Manager. What is the best configuration to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer. A. A recursive discovery for the network devices by using ICMPB. An explicit discovery for the network devices by using ICMPC. A recursive discovery for the network devices by using SNMPD. An explicit discovery for the network devices by using SNMP Answer: D 70-246 Updated Questions are 2015 Latest Released Which 100% will Meet in Your 70-246 Test!
