QUESTION 104 You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment. You plan to create a Configuration Manager query. You need to identify which components can be included in the WQL statement. Which three components should you identify? Each correct answer presents a complete solution. A. Criteria B. Collection limiting C. Security D. Omit duplicate rows E. Joins Answer: ADE QUESTION 105 You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment. Hardware inventory is enabled for all of the Configuration Manager clients. You create a device collection named Finance. All of the client computers in the finance department are members of the Finance collection. You need to include Trusted Platform Module (TPM) information in the hardware inventory of the finance department computers. Which object should you configure in Configuration Manager? A. Hardware Requirements B. Custom Client Device Settings C. Network Discovery D. a configuration item E. a computer association Answer: D Explanation: We are going to use Desired Configuration Management to run a script on target machines. The script will run on a regular schedule and place Bitlocker data into a new WMI class named SCCM\_Bitlocker. Then, we will SCCM extend hardware inventory so that it collects data from this new class. Compliance Rules Setting First, we will need to create a configuration baseline, a configuration item and two compliance rules. Reference: Tracking Bitlocker Status using SCCM 2012

<https://winventures.wordpress.com/2013/09/18/tracking-bitlocker-status-using-sccm-2012/> QUESTION 106 You manage a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment. The deployment contains a reporting services point. You subscribe to all client status reports. You need to subscribe to an Asset Intelligence report. From where should you configure the subscription? A. Reporting Services Configuration Manager B. the Report Server Web service site C. the Monitoring workspace from the Configuration Manager Console D. SQL Server Configuration Manager Answer: A QUESTION 107 Hotspot Question Your network contains a single Active Directory named contoso.com. A System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) primary site named S01 is deployed to contoso.com. The Configuration Manager deployment includes the servers configured as shown in the following table.

Server name	Site system role
Server1	Site server
Server2	Management point
Server3	Distribution point
Server4	Enrollment point
Server5	Software update point

The distribution point is configured to require HTTPS for client communications. You have a domain computer named Computer1 that runs the 64-bit version of Windows 8.1. You need to install the Configuration Manager client on Computer1 manually. Which network location should you use to start the installation? To answer, select the appropriate options in the answer area.

Answer Area

Answer:

QUESTION 108Your network contains a single Active Directory domain named contoso.com. System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) is deployed to contoso.com. You need to inventory the installed software on Windows Phone and iOS devices. What should you do first? A. Configure Software Inventory. B. Add a Microsoft Intune subscription. C. Configure Network Discovery. D. Install the Configuration Manager client. E. Enroll the mobile devices. Answer: A Explanation: Software inventory must be enabled for clients to collect inventory. Reference: Prerequisites for Software Inventory <https://technet.microsoft.com/en-us/library/hh696545.aspx> QUESTION 109Drag and Drop QuestionYour network contains a single Active Directory domain named contoso.com. System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) is deployed to contoso.com. You have a Windows 8.1 operating system image named Image1 in Configuration Manager. Image1 has the data source of \\server1.contoso.com\source\image1.wim. New client computers are deployed by using Image1. You have an application named App1. App1 is a configuration utility that must be installed by using a Windows Installer (MSI) package. You need to ensure that App1 is included in all future deployments of Image1. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions
Refresh Image1.
Install App1.exe.
Deploy App1.exe.
Capture Image1.
Mount Image1.wim.
Unmount Image1.wim.
Schedule updates for Image1.
Distribute the image to distribution points.

Answer:

Actions	Answer Area
Refresh Image1.	Mount Image1.wim.
Install App1.exe.	Install App1.exe.
Deploy App1.exe.	Deploy App1.exe.
Capture Image1.	Capture Image1.
Mount Image1.wim.	Mount Image1.wim.
Unmount Image1.wim.	Unmount Image1.wim.
Schedule updates for Image1.	Schedule updates for Image1.
Distribute the image to distribution points.	Distribute the image to distribution points.

QUESTION 111Your network contains an Active Directory forest named litwareinc.com. The forest has a single domain. The forest contains a System Center 2012 Configuration Manager environment. The environment contains a single primary site. You create a group named InstallTechs. You need to ensure that the members of InstallTechs can deploy Applications to desktop computers by using Configuration Manager. The solution must minimize the number of permissions assigned to InstallTechs. What should you do? A. Assign the Application Administrator security role to InstallTechs. Create a new collection that contains all of the desktop computers. Scope InstallTechs to the new collection. B. Assign the Application Deployment Manager security role to InstallTechs. Create a new collection that contains all of the desktop computers. Scope InstallTechs to the new collection. C. Add the Application Deployment Manager security role to InstallTechs. Create a new collection that contains computers. Add InstallTechs to the local Administrators group on each desktop computer. D. Assign the Application Administrator security role to InstallTechs. Create a new collection that contains all of the desktop computers. Add InstallTechs to the local Administrators group on each desktop computer. Answer: B Explanation: <http://technet.microsoft.com/en-us/library/hh524341.aspx> Glossary for Microsoft System Center 2012 Configuration Manager Application AdministratorA security role that grants permissions to administrative users so that they can perform both the Application Deployment Manager role and the Application Author role. Application Deployment Manager A security role that grants permissions to administrative users so that they can deploy and monitor applications. <http://blogs.technet.com/b/hhoy/archive/2012/03/07/role-based-administration-in-system-center-2012-configuration-manager.aspx> Role-Based Administration in System Center 2012 Configuration Manager In Configuration Manager 2012, Security Roles are used to collectively group objects and permissions (operations) for assignment to an Administrator. Instead of an individual permission set on a single instance of object, the Security Role provides a single Role assignment to an administrator; reducing the overall

complexity with permission management. An "object" in the Security Role is something that you want to manage access to and "permission" is the operational functions, such as Read, Modify and Delete.
