<https://drive.google.com/folderview?id=0B75b5xYLjSSNfnBpN04tdU9maXlvTDZkUEQ0StHLWUtmEXR2eTdBQk9hWINjVmdNVjBXZ28&usp=sharing> QUESTION 8 Your company has a private cloud that contains 200 virtual machines. The network contains

a server named Server1 that has the Microsoft Server Application Virtualization (Server App-V) Sequencer installed. You plan to sequence, and then deploy a line-of-business web application named App1. App1 has a Windows Installer package named Install.msi. App1 must be able to store temporary files. You need to identify which task must be performed on Server1 before you deploy App1. What task should you identify? A. Add a script to the OSD file. B. Install the Web Server (IIS) server role. C. Modify the environment variables. D. Compress Install.msi. Answer: B Explanation:

<http://blogs.technet.com/b/serverappv/archive/2012/05/09/server-app-v-recipe-ws-ftp-server.aspx> Before sequencing, prepare the OS by installing the following prerequisites: 1. IIS Web Server role (ensure IIS management scripts and tools are installed) 2. WebDeploy 2.0 QUESTION 9 Your company has a System Center 2012 infrastructure. The infrastructure contains the App

Controller and Virtual Machine Manager (VMM) roles. You deploy a service named SRV1 to the production environment in the public cloud. You also deploy SRV1 to a staging environment in the public cloud. You perform upgrades to SRV1 in the staging environment. You need to apply the upgrades from the staging environment to the production environment. What should you do? A. From the VMM Administrator Console, create a new virtual machine template. B. From the App Controller portal, perform an environment swap upgrade. C. From the VMM Administrator Console, create a new service. D. From the App Controller portal, import an SSL certificate. E. From the VMM Administrator Console, create a new service template. Answer: B Explanation:

<http://technet.microsoft.com/en-us/library/hh221342.aspx> Public cloud services can be upgraded in one of two ways: an environment swap or an in-place upgrade. An environment swap places the staging environment into the production environment. As the swap occurs, the existing production environment is moved into the staging environment. An in-place upgrade replaces the existing binaries and settings with new binaries and settings. QUESTION 10 Your network contains a System Center 2012 Virtual Machine Manager (VMM) infrastructure. The infrastructure contains 50 virtual machines. You need to deploy a Microsoft SQL Server dedicated administrator connection (DAC) package to a service. What should you create from the VMM Administrator Console? A. a Run As account B. a Capability Profile C. a virtual machine template D. an Application Profile Answer: D Explanation:

<http://technet.microsoft.com/en-us/library/hh427291> QUESTION 11 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains a server named Server1. Server1 hosts the VMM library. You add a server named Server2 to the network. You install the Windows Deployment Services (WDS) server role on Server2. You have the Install.wim file from the Windows Server 2008 R2 Service Pack 1 (SP1) installation media. You need to install Hyper-V hosts by using the bare-metal installation method. What should you do first? A. Convert Install.wim to a .vmc file. B. Convert Install.wim to a .vhd file. C. Add Install.wim to the VMM library. D. Add Install.wim to the Install Images Container. Answer: B Explanation: For the bare metal deployment, you need an operating system and one of the first steps to take is to create a bootable VHD for that operating system.

This is done by using the WIM2VHD tool to take the install.wim file from your Windows Server 2008 R2 SP1 installation media and convert it. QUESTION 12 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains 20 virtualization hosts. Each host contains 20 virtual machines. You need to configure the network fabric. The solution must prevent the virtual machines from connecting to a VLAN. What should you do from the Network Site properties? A. set the VLAN ID to 0. B. set the VLAN ID to 10. C. set the IP subnet to FD4A::/32. D. set the IP subnet to 192.168.1.0/20. Answer: A Explanation: VLAN 0 means you want VLAN disabled. Use this setting when you don't care about VLAN IDs. QUESTION 13 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains a virtualization host named Server2. Server2 runs Windows Server 2008 R2 Service Pack 1 (SP1). Server2 has the Hyper-V server role installed. You plan to deploy a service named Service1 to Server2. Service1 has multiple load-balanced tiers. You need to recommend a technology that must be implemented on Server2 before you deploy Service1. What should you recommend? A. TCP offloading B. the Network Policy and Access Services (NPAS) server role C. the Multipath I/O (MPIO) feature D. MAC address spoofing Answer: D Explanation:

<http://technet.microsoft.com/en-us/library/hh335098.aspx> If you want to deploy the service to a Windows Server 2008 R2-based Hyper-V host (with or without Service Pack 1), you must also enable MAC address spoofing for NLB to work correctly. If you do not, service deployment will fail. However, you cannot use the Enable spoofing of MAC addresses check box in the virtual machine

template or the associated hardware profile to configure this setting. Instead, you must use the VMM command shell to configure this setting after you create the template, or in the hardware profile that you use for the template. QUESTION 14 Your company has a private cloud that is managed by a System Center 2012 Virtual Machine Manager (VMM) infrastructure. The infrastructure contains a server named Server1 that has VMM installed. You plan to deploy the Hyper-V server role to a server named Server2. Server2 runs Windows Server 2008 R2. Server2 is member of a workgroup. You need to add Server2 to the VMM fabric. What should you do? (Each correct answer presents part of the solution. Choose three.) A. From the VMM Administrator Console, run the Add Resource Wizard, and then click Windows Server computers in a perimeter network. B. From the VMM 2012 installation media, install the VMM agent on Server2. C. From the VMM Administrator Console, run the Add Resource Wizard, and then click Windows Server computer in an untrusted Active Directory domain. D. Copy the SecurityFile.txt file from Server2 to Server1. E. From the Services console on Server1, start the SSDP Discovery service. F. Copy the ApplicationHost.config file from Server2 to Server1. Answer: ABDE Explanation: A: To add the Hyper-V host in the perimeter network In the VMM console, open the Fabric workspace. In the Fabric pane, click Servers. On the Home tab, in the Add group, click Add Resources, and then click Hyper-V Hosts and Clusters. The Add Resource Wizard starts. On the Resource location page, click Windows Server computers in a perimeter network, and then click Next. On the Target resources page, B: Before you can add a host that is on a perimeter network to VMM, you must install an agent locally on the server that you want to add. D: To ensure that the SecurityFile.txt file is available to VMM On the target host, navigate to the folder where the security file is stored. By default, the location is C:\Program Files\Microsoft System Center 2012 Virtual Machine Manager. The name of the security file is SecurityFile.txt. Transfer the security file to a location that is accessible to the computer on which a VMM console is installed. For example, transfer the file to the computer where the VMM console is installed, to an internal file share, or to a USB flash drive.

<http://technet.microsoft.com/en-us/library/gg610642.aspx> QUESTION 15 You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains five virtualization hosts. You add new storage to the network. You need to discover the storage from the VMM Administrator Console. What should you create first? A. a Hardware Profile B. a classification C. a Run As Account D. a Guest as Profile Answer: C Explanation: <http://technet.microsoft.com/en-us/library/gg610563> !!!RECOMMEND!!! 1. | 2016/09 Latest 70-247 Exam Dumps (PDF & VCE) 243 Q&As Download: <http://www.braindump2go.com/70-247.html> 2. | 2016/09 Latest 70-247 Exam Questions & Answers: <https://drive.google.com/folderview?id=0B75b5xYLjSSNfnBpN04tdU9maXlvTDZkUEQ0StHlWUtmEXR2eTdBQk9hWlNjVmdNVjBXZ28&usp=sharing>
